Enhancements of business model researches towards a framework that enables quantified business model comparisons especially in the scope of trend analyses Andreas Gassmann, 2017-11-21 Research Paper postgraduate from the year 2017 in the subject Business economics General grade language English abstract Today one of the major impacts of business models have been an increase in the possible business configurations a company can adopt because of the reduced coordination and transaction costs In other words they can increasingly work in partnerships offer joint value propositions build up multi channel and multi owned distribution networks and profit from diversified and shared revenue streams This however means that a company s business has more stakeholders becomes more complex and is harder to

understand and communicate Everybody would understand that the existing management concepts and tools are not sufficient enough anymore and that new ones have to be found For example Rentmeister and Klein call for new modelling methods in the domain of business models Effectively a whole range of authors propose using the relatively new concept of business models for managing companies in the Internet era When you are looking for the most modern frameworks to business model development you find three major approaches Approach number one is a very complete concept for describing a business model Furthermore the high level of details also allows the improvement of single components of a company This framework is called the Business Model Canvas and has been developed by Alexander Osterwalder since 2004 The second approach is the Business Model Navigator from the university St Gallen This framework is less detailed than the Business Model Canvas but focuses more on patterns of different companies Besides the framework can perfectly be used when a business model has to be described fast and low detailed *The Big Pad of 50 Blank, Extra-Large Business Model Canvases and 50 Blank, Extra-Large Value Proposition Canvases* Alexander Osterwalder, Yves Pigneur, Gregory Bernarda, Alan Smith, 2016-12-05 100 Blank Extra Large Tear Out Canvases Give You More Space to Brainstorm and Strategize Millions of people use the Business Model Canvas and the Value Proposition Canvas to clearly understand customers create better products and grow businesses This supplement to the bestselling books Business Model Generation and Value Proposition Design gives you more space to scribble brainstorm and move sticky notes with 50 blank extra large tear out Business Model Canvases 15 x 11 or 38cm x 28cm and 50 blank extra large tear out Value Proposition Canvases 15 x 11 or 38cm x 28cm The large format makes it easier to keep the creative ideas flowing be inspired and share your work with others In addition to the 100 blank canvases the two sample learning canvases provide trigger questions to help you learn to use each box in the canvas and jump start progress Whether you re chasing down a game changing business model or working to evaluate and refresh an old one the highly visual spacious design makes it easy to use the powerful centerpiece tool in Business Model Generation to lead your product brand or company into the next stage of growth If you need space to think hard about your value proposition the 50 blank Value Proposition Canvases will help you create products and services that perfectly match your customers needs and desires When business conversations become mired in hunches and intuitions or you re haunted by that expensive new product launch that flopped these canvases offer a quick way to raise the collective intelligence of your team Tear out a blank canvas and design a powerful visual business model or value proposition based on the global bestsellers Business Model Generation and Value Proposition Design These transformational business tools have proven themselves at all types of companies from start ups to such large organizations as MasterCard 3M Coca Cola GE Fujitsu LEGO and Philips An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach Fabian Hoeft, 2019-10-24 Master s Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language

English abstract Today's world of mobility is characterised by a high degree of dynamism and change is becoming apparent. Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany. The share of electric vehicles is still well below one per cent. Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder. One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars. Car electrification is a solution for converting cars with conventional combustion engines to electric drives. In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars. A comprehensive concept of a business model approach from a start-up perspective has been developed based on the analysis of the environment, industry and customer needs. Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars. Besides the small scale of implementation, the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability. The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach. A high openness to purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion. The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight. The business model approach developed based on the findings obtained differs fundamentally from the strategies of today's providers. By incorporating the existing infrastructure of workshops and service points, proximity to the end customer and scalability of the business operation can be achieved. Partnering with universities and industry are two critical elements in the development of a sustainable, secure and user-friendly technical solution.

Strategic analysis of Mobike's business model in China and its applicability in Germany

Marko Francesevic, Marco Schuster, 2019-06-11 Seminar paper from the year 2017 in the subject Business economics Company formation Business Plans grade 1.0 Copenhagen Business School language English abstract Innovative and resource saving mobility offers are needed in times of urbanization, climate change and an increasing scarcity of resources. Car2Go and BlaBlaCar are some of those companies that disrupted the traditional mobility market over the last years. Another example is the Chinese bike rental company Mobike which provides users with flexible on-demand and nearby access to mobility through a large fleet of bicycles that are distributed across the largest cities in China. The company's usage of the newest IoT (Internet of Things) technologies and a large amount of funding have resulted in a massive expansion across China, Singapore and just very recently UK in just 1.5 years. It also resulted in a replacement of traditional transport modes such as the car as the primary mode of transportation. Thus one can say that Mobike and its many competitors help to transform Chinese megacities in a less polluted and more liveable area. All of those mobility disruptors named before are

based on the principle of sharing economy Its most important characteristics are access over ownership and collaborative consumption Recent social demographic and political changes in Germany have made mobility schemes based on the sharing economy a potential option to traditional transport modes As climate change and the resulting need to lower emissions is not only a Chinese issue but a global one it is only fair to ask whether the business model of Mobike can be applied in the German market Hence this paper aims to answer the following question Is the business model of Mobike applicable in the German market

Suitability and application of selected tools of Strategic Management to Simulation Games (Global Management) Benjamin Wagner, 2020-12-14 Seminar paper from the year 2020 in the subject Engineering Industrial Engineering and Management grade 1.3 University of Applied Sciences Georg Agricola Bochum Wissenschaftsbereich Elektro Informationstechnik und Wirtschaftsingenieurwesen course Simulation Game language English abstract This thesis deals with the necessity of using management tools within a business game In the first descriptive part it critically examines the common management tools mentioned in the literature It is limited to the treatment of three tools The Ansoff Matrix according to Harry Igor Ansoff Porters Five Forces industry structure analysis and the Business Model Canvas according to Alexander Osterwalder and Yves Pigneur In the following analysis the work applies these tools practically to the fantasy company Xeltronics 1

What does strategic management deal with In the Anglo American literature management is used in two variants of meaning On the one hand management in the functional sense aims to describe the processes and functions such as planning organization leadership and control that are necessary in organizations based on the division of labor Management in the institutional sense describes the people who perform management tasks their activities and their roles There are the two main components of the strategy term are the time element and the reference object According to their etymological origin the terms strategy and strategic are strongly associated with the term longer term It is difficult to determine precisely when strategic management was established as an independent field of research The year 1977 is mentioned as the year of birth for example when a conference was held at the University of Pittsburgh in the USA whose contributions were presented in 1979 by Schendel and Hofer under the title Strategie Management A New View of Business Policy and Planning Behind the term strategic management is a management philosophy that expresses rethinking Basically the group is experiencing a similar phenomenon here as in the 1960s when the term marketing also signalled the need to rethink after the original sellers markets had turned into buyers markets Although there are many different ideas associated with the concept of strategic management a common goal can be identified Strategic management is able to control and guide the long term evolution of the company The role of the manager is important but according to a study almost 85% of the German population think that their salaries are high to high
