Foundations Of Multithreaded Parallel And Distributed Programming:

Foundations of Multithreaded, Parallel, and Distributed Programming Gregory R. Andrews, 2000 Foundations of Multithreaded Parallel and Distributed Programming covers and then applies the core concepts and techniques needed for an introductory course in this subject Its emphasis is on the practice and application of parallel systems using real world examples throughout Greg Andrews teaches the fundamental concepts of multithreaded parallel and distributed computing and relates them to the implementation and performance processes He presents the appropriate breadth of topics and supports these discussions with an emphasis on performance Features Emphasizes how to solve problems with correctness the primary concern and performance an important but secondary concern Includes a number of case studies which cover such topics as pthreads MPI and OpenMP libraries as well as programming languages like Java Ada high performance Fortran Linda Occam and SR Provides examples using Java syntax and discusses how Java deals with monitors sockets and remote method invocation Covers current programming techniques such as semaphores locks barriers monitors message passing and remote invocation Concrete examples are executed with complete programs both shared and distributed Sample applications include scientific computing and distributed systems 0201357526B04062001

Type Systems for Distributed Programs: Components and Sessions Ornela Dardha,2016-07-27 In this book we develop powerful techniques based on formal methods for the verification of correctness consistency and safety properties related to dynamic reconfiguration and communication in complex distributed systems In particular static analysis techniques based on types and type systems are an adequate methodology considering their success in guaranteeing not only basic safety properties but also more sophisticated ones like deadlock or lock freedom in concurrent settings The main contributions of this book are twofold i We design a type system for a concurrent object oriented calculus to statically ensure consistency of dynamic reconfigurations ii We define an encoding of the session pi calculus which models communication in distributed systems into the standard typed pi calculus We use this encoding to derive properties like type safety and progress in the session pi calculus by exploiting the corresponding properties in the standard typed pi calculus
