Map Scripting 101 Adam DuVander, 2010 Websites like MapQuest and Google Maps have transformed the way we think about maps. But these services do more than offer driving directions; they provide APIs that web developers can use to build highly customized map-based applications. The author Adam DuVander delivers 73 useful scripts, examples that will show you how to create interactive maps and mashups. *Book cover: Planning Your Perfect Road Trip* Theresa L.

Goodrich, 2023-01-30 Looking for the ultimate guide to planning your perfect road trip? You've found it! This comprehensive guidebook takes you step by step through the process of planning an unforgettable road trip. Whether you're traveling with friends, family, or embarking on a solo adventure, this book has everything you need to make your journey a success. Inside you'll find practical advice on choosing road trip destinations, creating a packing list, and tips for navigating the open road. You'll also find guidance on what to eat, where to stay, and how to make the most of your time on the road. With insights on traveling with others and traveling solo, this book offers something for everyone. In *Planning Your Perfect Road Trip*, you'll learn how to enjoy the journey as much as the destination. From scenic routes to roadside attractions, this guidebook will help you create memories that last a lifetime. Whether you're planning a weekend getaway or an extended cross-country adventure, this book is your ultimate resource for hitting the road in style. Get your copy today and start planning your dream road trip.

Uberland Alex Rosenblat, 2018-10-23 Silicon Valley technology is transforming the way we work, and Uber is leading the charge. An American startup that promised to deliver entrepreneurship for the masses through its technology, Uber instead built a new template for employment using algorithms and Internet platforms. Upending our understanding of work in the digital age, *Uberland* paints a future where any of us might be managed by a faceless boss. The neutral language of technology masks the powerful influence algorithms have across the New Economy. *Uberland* chronicles the stories of drivers in more than twenty-five cities in the United States and Canada over four years, shedding light on their working conditions and providing a window into how they feel behind the wheel. The book also explores Uber's outsized influence around the world: the billion-dollar company is now influencing everything from debates about sexual harassment and transportation regulations to racial equality campaigns and labor rights initiatives. Based on award-winning technology ethnographer Alex Rosenblat's firsthand experience of riding over 5,000 miles with Uber drivers, daily visits to online forums, and face-to-face discussions with senior Uber employees, *Uberland* goes beyond the headlines to reveal the complicated politics of popular technologies that are manipulating both workers and consumers. *Designing the Digital Experience* David Lee King, 2008 Written for creative, tech-savvy, and business-minded individuals who want to increase the accessibility of their websites, this sensible guidebook explains the concepts behind designing experiences on the internet. From helping customers quickly find information and make their purchases to clearly communicating needs and interests, this resource will not only develop consumer loyalty but will encourage them to spread the word about the sites they frequent. Focusing on the three key areas

of structure community and customers designers will enable clients to focus on their own goals rather than on difficulties in navigating Also included are tips on how to generate conversations with blogs wikis and podcasting to create a personal touch

Proceedings of the 2023 International Conference on Advances in Computing Research (ACR'23) Kevin Daimi, Abeer Al Sadoon, 2023-05-26 This book includes recent research on Data Science IoT Smart Cities and Smart Energy Health Informatics and Network Security The International Conference on Advances in Computing Research ACR 23 brings together a diverse group of researchers from all over the world with the intent of fostering collaboration and dissemination of the advances in computing technologies The conference is aptly segmented into six tracks to promote a birds of the same feather congregation and maximize participation The first track covers computational intelligence which include among others research topics on artificial intelligence knowledge representation and management application and theory of neural systems fuzzy and expert systems and genetic algorithms The second track focuses on cybersecurity engineering It includes pertinent topics such as incident response hardware and network security digital biometrics and forensics technologies and cybersecurity metrics and assessment Further it features emerging security technologies and high tech systems security The third track includes studies on data analytics It covers topics such as data management statistical and deep analytics semantics and time series analytics and a multitude of important applications of data analytics in areas such as engineering health care business and manufacturing The fourth track on network and communications covers a wide range of topics in both areas including protocols and operations ubiquitous networks ad hoc and sensor networks cellular systems virtual and augmented reality streaming information centric networks and the emerging areas in connected and autonomous vehicle communications Lastly the final track on cloud and mobile computing includes areas of interest in cloud computing such as infrastructure service management and operations architecture and interoperability and federation This track also includes important topics in mobile computing such as services and applications communication architectures positioning and tracking technologies the general applications of mobile computing
