Model of the Universe Bobby McGehee,2010-02 This Model of the Universe concludes the universe to be a spherical region within a much larger region of primordial matter Primordial Matter is determined to be an endless array of positroniums matter and antimatter particles stabilized in and by an equally spaced 6 cm hexahedron arrangement When positron and electron particles come in contact they annihilate into photons when photon concentrations become adequate they precipitate into corporeal matter of the universe The initial annihilation started a chain reaction from a single it is only converted from one form of matter into another All processes in this Model have been proven and verified all are consistent with the Laws of Physics      **McGraw-Hill Encyclopedia of Science & Technology** Sybil P.
