

The background of the slide is a photograph of a building's steel frame under construction. The image shows a complex network of horizontal and vertical steel beams, with a prominent diagonal bracing member on the right side. The lighting is somewhat dim, highlighting the metallic texture and the geometric patterns of the structure.

Introduction To Building Technology:

Construction Technology Eric Fleming, 2009-02-12 This new textbook provides a comprehensive introduction to every aspect of the technology of low rise construction. It includes sub structure, site work, setting out and foundations and superstructure, flooring, roofs, finishes, fittings and fixtures. The material here covers the first year course requirement of all courses on which construction technology is taught, no matter what the ultimate qualification. It offers tried and tested solutions to a range of construction problems and is organised following the sequence of construction. It will show what has been done in the past, demonstrating good practice, what works and what doesn't, and common faults. There are summaries of the more important BSI documents and reference to the latest building regulations. Lengthy explanations are avoided by relying heavily on hundreds of illustrations, pairing detail drawings with clear photographs to show real life construction situations. Introduction to Architectural Technology William McLean, 2008-10-06

Understanding the relationship between design and technology is critical to the understanding of architecture. Aimed clearly at architectural students, this book provides an accessible introduction to all aspects of architectural technology: structural physics, structural elements and forms, heating, lighting, environmental control and computer modeling. As well as providing a clear grounding in these topics, it will also help students to integrate their design thinking with appropriate structural and environmental solutions. The book sets out to explain the relationships between physical phenomena, materials, building elements and structural types using simple classification systems and real world examples. Photographs are used to familiarize the user with common construction technology while historical examples are employed to chart significant moments in the history of architectural engineering. Every topic area is accompanied by a set of cross references for further reading and research. In addition, this volume explores current computer techniques for assisting students to predict the structural and environmental behavior of buildings. It also uses historical precedents to explain how the success of a technology is directly related to its cultural context. Written by three experienced teachers, this book will be invaluable for those contemplating the study of architecture and for those already embarked on such a course.

Barry's Introduction to Construction of Buildings Stephen Emmitt, Christopher A. Gorse, 2009-02-05 The five volume series *Barry's Construction of Buildings* has been established as a standard text on building technology for many years. However, a substantial update has long been required and while doing this, the opportunity has been taken to reduce five volumes to two in a more user friendly format. The introductory volume covers domestic construction and brings together material from volumes 1, 2 and part of 5. The extensive revision includes modern concepts on site assembly, environmental issues and safety and features further reading.

Building Performance Simulation for Design and Operation Jan L.M. Hensen,Roberto Lamberts,2012-09-10 Effective building performance simulation can reduce the environmental impact of the built environment improve indoor quality and productivity and facilitate future innovation and technological progress in construction It draws on many disciplines including physics mathematics material science biophysics and human behavioural environmental and computational sciences The discipline itself is continuously evolving and maturing and improvements in model robustness and fidelity are constantly being made This has sparked a new agenda focusing on the effectiveness of simulation in building life cycle processes Building Performance Simulation for Design and Operation begins with an introduction to the concepts of performance indicators and targets followed by a discussion on the role of building simulation in performance based building design and operation This sets the ground for in depth discussion of performance prediction for energy demand indoor environmental quality including thermal visual indoor air quality and moisture phenomena HVAC and renewable system performance urban level modelling building operational optimization and automation Produced in cooperation with the International Building Performance Simulation Association IBPSA and featuring contributions from fourteen internationally recognised experts in this field this book provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition It is primarily intended for advanced students in building services engineering and in architectural environmental or mechanical engineering and will be useful for building and systems designers and operators

Building the Churches of Kievan Russia Pavel A. Rappoport,2016-12-05 This work is the first systematic study of how monumental buildings were constructed in medieval Russia It deals specifically with ecclesiastical architecture but also discusses such secular architecture palaces or towers In scope the book covers the territory of the Kievan state and the principalities that succeeded it from the 10th century to the 13th century Pavel Aleksandrovich Rappoport was the author of many of the standard works on the architectural history of Russia whether monumental military or domestic He was also a leading archaeologist In Building the Churches of Kievan Russia his aim is to investigate how people went about building them from brickmaking and lime firing to the roofing and decoration from how the churches were laid out to how much brickwork was laid in a day This book treats all these processes as one integrated and interconnected procedure The detailed analysis enables Rappoport to identify the work of particular teams of builders even individual masters and to follow their progress from one site to another and one town to a second Similarly he documents how the Byzantine styles and methods of church building imported into Russia after its conversion in 989 were gradually adapted to meet the needs of local circumstances and climate This study will be of direct relevance to those concerned with the architecture and the Church of pre Mongol Russia as well as its social history The investigation of the earliest churches furthermore represents the sole extended discussion of Byzantine building practices In

terms of methodology the book will be of interest to all architectural historians and archaeologists concerned with the Middle Ages and makes accessible in English material that has hitherto only been available in Russian
