

Online Movie Ticket Booking System Documentation

1. Introduction

Welcome to the documentation for our Online Movie Ticket Booking System. This system is designed to facilitate the booking of movie tickets through an online platform, providing users with convenience and flexibility in selecting seats, showtimes, and movies. This document serves as a comprehensive guide for users, administrators, developers, and testers to understand the functionalities, architecture, and usage of the system.

2. System Overview

Our Online Movie Ticket Booking System enables users to browse movies, view showtimes, select seats, and make bookings from the comfort of their homes or on the go. The system caters to both registered users and guests, offering a seamless booking experience. Administrators have access to backend functionalities for managing movies, showtimes, and user bookings.

3. System Architecture

The system follows a client-server architecture:

- **Frontend:** Developed using HTML, CSS, and JavaScript frameworks such as React.js. The frontend provides an intuitive user interface for browsing movies, selecting seats, and making bookings.
- **Backend:** Built using Node.js and Express.js, the backend serves as the middleware between the frontend and the database. It handles authentication, business logic, and database interactions.
- **Database:** Utilizes a relational database management system (e.g., MySQL, PostgreSQL) to store data such as user profiles, movie details, showtimes, bookings, and seat availability.

4. Functional Requirements

- **User Registration:** Users can create accounts by providing necessary details such as email, password, and personal information.
- **User Authentication:** Registered users can securely log in to their accounts using email and password authentication.
- **Browsing Movies:** Users can browse through a list of available movies, sorted by genres, release dates, or popularity.
