Martin,P.H. Welch,2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools

based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline   Client/server Programming with OS/2 2.0 Robert Orfali,Dan Harkey,1992 This updated edition features extensive revisions to explain OS 2 2 0 and its new functions The authors also introduce new database features and incorporate them into RSQL New SAA features System View and the Distributed Computing Environment DCE are fully described Code developed with OS 2 2 0 s Workframe environment and the new 32 bit C Set 2 compiler enables users to make improvements in tasking APIs and PM calls Other new sections in the edition address Novell TCP IP CPI C CUA 91 and the OS 2 Workplace Shell   **NET Architecture and Programming Using Visual C++** Peter Thorsteinson,Robert J.
