European Symposium on Computer Aided Process Engineering ESCAPE series presents the latest innovations and
achievements of leading professionals from the industrial and academic communities The ESCAPE series serves as a forum
for engineers scientists researchers managers and students to present and discuss progress being made in the area of
computer aided process engineering CAPE European industries large and small are bringing innovations into our lives
whether in the form of new technologies to address environmental problems new products to make our homes more
comfortable and energy efficient or new therapies to improve the health and well being of European citizens Moreover the
European Industry needs to undertake research and technological initiatives in response to humanity s Grand Challenges
described in the declaration of Lund namely Global Warming Tightening Supplies of Energy Water and Food Ageing Societies
Public Health Pandemics and Security Thus the Technical Theme of ESCAPE 21 will be Process Systems Approaches for
Addressing Grand Challenges in Energy Environment Health Bioprocessing Nanotechnologies *Parallel Computing: On the
Road to Exascale* Gerhard R. Joubert, Hugh Leather, Mark Parsons, Frans Peters, 2016-04-15 As predicted by Gordon E Moore
in 1965 the performance of computer processors increased at an exponential rate Nevertheless the increases in computing
speeds of single processor machines were eventually curtailed by physical constraints This led to the development of parallel
computing and whilst progress has been made in this field the complexities of parallel algorithm design the deficiencies of
the available software development tools and the complexity of scheduling tasks over thousands and even millions of
processing nodes represent a major challenge to the construction and use of more powerful parallel systems This book
presents the proceedings of the biennial International Conference on Parallel Computing ParCo2015 held in Edinburgh
Scotland in September 2015 Topics covered include computer architecture and performance programming models and
methods as well as applications The book also includes two invited talks and a number of mini symposia Exascale computing
holds enormous promise in terms of increasing scientific knowledge acquisition and thus contributing to the future well being
and prosperity of mankind A number of innovative approaches to the development and use of future high performance and
high throughput systems are to be found in this book which will be of interest to all those whose work involves the handling
and processing of large amounts of data Embedded Computer Systems: Architectures, Modeling, and Simulation Koen
