Castillo, 2023-12-22 This book presents interdisciplinary research in the science of Human Cognition through mathematical and computational modeling and simulation Featuring new approaches developed by leading experts in the field of cognitive science it highlights the relevance and depth of this important area of social sciences and its expanding reach into the biological physical computational and mathematical sciences This contributed volume compiles the most recent advancements and cutting edge applications of cognitive modeling employing a genuinely multidisciplinary approach to simulate thinking memory and decision making The topics covered encompass a wide range of subjects such as Agent based Modeling in psychological research the Nyayasutra proof pattern the utilization of the Pheromone Trail Algorithm for modeling Analog Memory the theory and practical applications of Social Laser Theory addressing the challenges of probabilistic learning in brain and behavior models adopting a Physicalistic perspective to understand the emergence of cognition and computation an in depth analysis of the conjunction fallacy as a factual occurrence exploring quantum modeling and causality in physics and its extensions examining compositional vector semantics within spiking neural networks delving into the realms of Optimality Prototypes and Bilingualism and finally investigating the intricate dimensionality of color perception Given its scope and approach the book will benefit researchers and students of computational social sciences mathematics and its applications quantum physics The Dark Social Toija Cinque, Alexia Maddox, Robert W. Gehl, 2023-11-07 This book explores how people interact online through anonymous communication in encrypted hidden or otherwise obscured online spaces Beyond the Dark Web itself this book examines how the concept of dark social broadens the possibilities for examining notions of darkness and sociality in the age of digitality and datafied life The authors take into account technical moral ethical and pragmatic responses to ourselves and communities seeking to belong in of the dark Scholarship on the Darknet and Dark Social Spaces tends to focus on the uses of encryption and other privacy enhancing technologies to engender resistance acts Such understandings of the dark social are naturally in tension with social and political theories which argue that for politics and acts to matter they must appear in the public light They are also in tension with popular narratives of the dark recesses of the web which are disparaged by structural powers who seek to keep their subjects knowable and locatable on the clear web The binary of dark

versus light is challenged in this book. The authors' provocation is that practices of dark resistance, motility, and power are enacted by emerging data cultures. This book draws together scholarship, activism, and creativity to push past conceptual binary positions and create new approaches to darknet and dark social studies. *The Dark Social: Online Practices of Resistance, Motility, and Power* will be a key resource for academics, researchers, and advanced students of media studies, cultural studies, communication studies, research methods, and sociology. This book was originally published as a special issue of *Continuum: Journal of Media Cultural Studies*. *Proceedings of the XVI International Symposium Symorg 2018*, Nevenka Žarkić-Joksimović, Sanja Marinković, 2018-06-12. *Token Economy*, Shermin Voshmgir, 2025-04-20.

The third edition of *Token Economy* is not just an update; it is a reworking of a foundational book that has helped thousands make sense of how Bitcoin and other blockchain networks like Ethereum or Solana are reshaping our digital financial and political systems. The book serves as an excellent primer for understanding the key aspects of the technological infrastructure, as well as the decentralized applications built on top of it, from DeFi to various token types and decentralized organizations. It also explains the difference between DeFi, CeFi, and TradFi, why blockchain networks can be considered the backbone of Web3, and the increasing role of AI. This edition adds many practical use cases, blending history, systems theory, and real-world use cases to demystify everything from Bitcoin to Tokens and DAOs. It explains how blockchain architecture, token design, and incentive mechanisms intersect with regulation, politics, and economics. You'll learn how crypto rewrites money, what stablecoins actually do, how DAOs govern digital communities, and why many token ecosystems fail, not because of code but because of incentives and governance. If you're learning, building, investing, teaching, or regulating in Web3, this book offers critical clarity in a field full of jargon. As a longtime voice of clarity in the crypto world, the author, Shermin Voshmgir, weaves together historical analysis, technical insight, and interdisciplinary critique in a way that makes complex systems both legible and accessible. The third edition includes many more use cases than previous editions and reflects a maturing industry, one where many early promises of decentralization have collided with the realities of centralization, custody, risk, regulatory capture, and broken incentive design. While many books on crypto focus on trading or superficial overviews, the book remains rooted in systems thinking and long-term relevance.

What This Book Offers: A holistic framework for understanding Web3 infrastructure, including blockchain architectures, consensus mechanisms, privacy, scalability, and the economics of decentralization. A critical exploration of money and tokenization, offering both historical context and future scenarios. It asks hard questions about whether cryptocurrencies and stablecoins can replace fiat money and explains how financial literacy remains the first line of defense against fraud and hype. A grounded analysis of decentralized autonomous organizations (DAOs) and purpose-driven tokens, using real-world case studies of protocols like Bitcoin, Helium, Ocean Protocol, and MakerDAO. A design thinking framework for evaluating token incentives, governance structures, and stakeholder dynamics, bridging political science, economics, cybernetics, and complex systems theory. Whether you're a builder, policymaker, regulator, academic, investor, or

simply crypto curious Token Economy will help you Understand the difference between hype and real infrastructure Explore the incentives and governance dynamics embedded in every protocol Make better decisions around investing building or regulating digital assets Bridge the gap between idealism and realism in Web3 Husbandry Spiritualized: or, the heavenly use of earthly things, etc. Edited by J.
