an extensive comparison of different jurisdictional rules and notification requirements beyond standard turnover thresholds how Big Tech acquisitions can be subjected to scrutiny in the European Union via referrals under Article 22 of the European Union Merger Regulation EUMR potentially in combination with national call in tools and or Article 14 of the Digital Markets Act DMA and how the latter compares to the reporting requirement under the Digital Markets Competition and Consumers DMCC Act in the United Kingdom market definition and market power assessments including but not limited to social media and advertising markets how both traditional and novel theories of harm can be applied in the context of digital platforms and ecosystems application of theories of harm relating to killer acquisitions and reverse killer acquisitions the development of an ecosystem theory of harm and artificial intelligence as the new frontier Policy proposals and the academic legal literature are taken into account with due regard to economic considerations as well With competition authorities and legislators worldwide grappling to find an appropriate response to the expansion and consolidation of dominance in various digital markets it appears necessary to contemplate alternatives to the current turnover based notification thresholds and to rethink the substantive assessment of Big Tech acquisitions This book with its thorough guidance on the characteristics challenges and treatment of digital platforms and ecosystems in the context of merger control and its clear exposition of applicable theories of harm will greatly assist practitioners competition authorities and policymakers to successfully navigate through the challenging tasks of establishing jurisdiction defining relevant markets and assessing market power and competitive harm
