### 16. Comparison of Genotype and Phenotype

| Phenotype | The outward expression of an organism's genotype; an organism's phenotype is its physical and physiological traits | A physical characteristic, such as pea shape; a physiological characteristic, such as sickle cell anemia; or a behavioural characteristic, such as territorial behaviour |

- Mendel's discovery of the allele is so important because the laws that Mendel developed through his work on pea plants formed the foundations of our modern theory of inheritance and his discovery explained the mechanism underlying evolution and natural selection.
