

A Literature Review on Artificial Intelligence

S. A. Oke
University of Lagos

Abstract

Research on artificial intelligence in the last two decades has greatly improved performance of both manufacturing and service systems. Currently, there is a dire need for an article that presents a holistic literature survey of worldwide, theoretical frameworks and practical experiences in the field of artificial intelligence. This paper reports the state-of-the-art on artificial intelligence in an integrated, concise, and elegantly distilled manner to show the experiences in the field. In particular, this paper provides a broad review of recent developments within the field of artificial intelligence (AI) and its applications. The work is targeted at new entrants to the artificial intelligence field. It also reminds the experienced researchers about some of the issues they have known.

Keywords: AI, Neural Network, Business Efficiency, Genetic Algorithms, Fuzzy Logic.

1. Introduction

In the 21st century artificial intelligence (AI) has become an important area of research in virtually all fields: engineering, science, education, medicine, business, accounting, finance, marketing, economics, stock market and law, among others (Halal (2003), Masnikosa (1998), Metaxiotis et al. (2003), Raynor (2000), Stefanuk and Zhozhikashvili (2002), Tay and Ho (1992) and Wongpanuwatana et al. (2000)). The field of AI has grown enormously to the extent that tracking proliferation of studies becomes a difficult task (Ambite and Knoblock (2001), Balazinski et al. (2002), Cristani (1999) and Goyache (2003)). Apart from the application of AI to the fields mentioned above, studies have been segregated into many areas with each of these springing up as individual fields of knowledge (Eiter et al. (2003), Finkelstein et al. (2003), Grunwald and Halpern (2003), Guestrin et al. (2003), Lin (2003), Stone et al. (2003) and Wilkins et al. (2003)).

The Routledge Handbook of Artificial Intelligence and Philanthropy Giuseppe Ugazio, Milos Maricic, 2024-11-07

The Routledge Handbook of Artificial Intelligence and Philanthropy acts as a catalyst for the dialogue between two ecosystems with much to gain from collaboration artificial intelligence AI and philanthropy Bringing together leading academics AI specialists and philanthropy professionals it offers a robust academic foundation for studying both how AI can be used and implemented within philanthropy and how philanthropy can guide the future development of AI in a responsible way The contributors to this Handbook explore various facets of the AI philanthropy dynamic critically assess hurdles to increased AI adoption and integration in philanthropy map the application of AI within the philanthropic sector evaluate how philanthropy can and should promote an AI that is ethical inclusive and responsible and identify the landscape of risk strategies for their limitations and or potential mitigation These theoretical perspectives are complemented by several case studies that offer a pragmatic perspective on diverse successful and effective AI philanthropy synergies As a result this Handbook stands as a valuable academic reference capable of enriching the interactions of AI and philanthropy uniting the perspectives of scholars and practitioners thus building bridges between research and implementation and setting the foundations for future research endeavors on this topic The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Artificial Intelligence and Art History, 2026-01-22 Artificial intelligence is transforming human creativity and the study of art Yet it is a technology that is difficult to understand from a position outside computer science This timely volume Artificial Intelligence and Art History investigate tensions and opportunities that are arising in human machine dialogues about visual art Contributors explore recent developments in machine learning and computer vision and debate whether algorithmic analyses of art open new possibilities for human seeing Do quantitative methodologies threaten humanistic discourses about cultural artefacts Alternatively can working at scale offer fresh perspectives on traditional conceptions of and approaches to artistic style methods and techniques The chapters in this volume demonstrate how a range of technologies falling under the umbrella of AI challenge the epistemological ambitions of both humanistic and scientific study while also addressing the consequences of understanding vision as a metaphor for a computational processing By investigating how AI and computer vision are working or might work in partnership with art historical research methods this volume also interrogates urgent ethical questions that are impacting on research agendas in this interdisciplinary field
