A Mathematical Gift, II Kenji Ueno, Kōji Shiga, Shigeyuki Morita, 2003 This book brings the beauty and fun of mathematics to the classroom It offers serious mathematics in a lively reader friendly style Included are exercises and many figures illustrating the main concepts The first chapter talks about the theory of trigonometric and elliptic functions It includes subjects such as power series expansions addition and multiple angle formulas and arithmetic geometric means The second chapter discusses various aspects of the Poncelet Closure Theorem This discussion illustrates to the reader the idea of algebraic geometry as a method of studying geometric properties of figures using algebra as a tool This is the second volume originating from a series of lectures given by the authors at Kyoto University Japan It is suitable for classroom use for high school mathematics teachers and for undergraduate mathematics courses in the sciences and liberal arts The first volume is available as Volume 19 in the AMS series Mathematical World Circles, Spheres and Spherical Geometry

Hiroshi Maehara, Horst Martini, 2024-08-09 This textbook focuses on the geometry of circles spheres and spherical geometry Various classic themes are used as introductory and motivating topics The book begins very simply for the reader in the first chapter discussing the notions of inversion and stereographic projection Here various classical topics and theorems such as Steiner cycles inversion Soddy's hexlet stereographic projection and Poncelet's porism are discussed The book then delves into Bend formulas and the relation of radii of circles focusing on Steiner circles mutually tangent four circles in the plane and other related notions Next some fundamental concepts of graph theory are explained The book then proceeds to explore orthogonal cycle representation of quadrangulations giving detailed discussions of the Brightwell Scheinerman theorem an extension of the Koebe Andreev Thurston theorem Newton's 13 balls problem Casey's theorem an extension of Ptolemy's theorem and its generalizations The remainder of the book is devoted to spherical geometry including a chapter focusing on geometric probability on the sphere The book also contains new results of the authors and insightful notes on the existing literature bringing the reader closer to the research front Each chapter concludes with related exercises of varying levels of difficulty Solutions to selected exercises are provided This book is suitable to be used as textbook for a geometry course or alternatively as basis for a seminar for both advanced undergraduate and graduate students alike **A Mathematical Gift,**

III Koji Shiga, Toshikazu Sunada, 2005-07-18 This book brings the beauty and fun of mathematics to the classroom It offers serious mathematics in a lively reader friendly style Included are exercises and many figures illustrating the main concepts The first chapter talks about the theory of manifolds It includes discussion of smoothness differentiability and analyticity the idea of local coordinates and coordinate transformation and a detailed explanation of the Whitney imbedding theorem both in weak and in strong form The second chapter discusses the notion of the area of a figure on the plane and the volume of a solid body in space It includes the proof of the Bolyai Gerwien theorem about scissors congruent polyhedra and Dehn's solution of the Third Hilbert Problem This is the third volume originating from a series of lectures given at Kyoto University
