About This Book: Set up the development environment and obtain the Google API key to create your first map application. Create a cutting edge Google maps application by implementing all the concepts learned. A step by step tutorial guide that is full of pragmatic examples. Who This Book Is For: If you are an Android developer and want to integrate maps into your application then this book is definitely for you. This book is intended for novice Android application developers who would like to get up and running with map rich applications using Google Maps. Some basic development experience would be helpful but it's not a mandate. What You Will Learn: Get to know about the basic development environment setup needed to create a successful map application. Generate an SHA1 fingerprint, obtain an API key and create a basic map application. Detect different types of maps and implement them in your application. Add information to your map such as markers, overlays, information windows and shapes. Explore the interaction with maps and work with gestures. Change the different camera views in your map application. Work with real time GPS location data and implementing it in your application. Apply Street View and integrate the StreetViewPanorama fragment to your application. Employ the native Google maps application to solve some of the tasks using intents. Create a cutting edge Google maps application by implementing all the concepts learned. In Detail: This book helps you to overcome the most common problems faced by users and helps you create a successful map application without any hassle. The book starts with a brief description of how to set up an environment and obtain an API key to create your map application. This book will teach you about adding markers, overlays and information windows to the map in detail. You will then dive deep into customizing various types of maps and working with location data and Google Street view. By the end of this book you will be able to create succinct map applications in Android using Google maps efficiently. Style and approach: The book is tailored for the reader with a fundamental approach to Android Google Maps providing a step by step introduction to Android Google Maps. It focuses on simple easy to understand examples that are pragmatic and serve as useful basis for real world applications. Different topics are approached in a bottom up fashion gradually going from the simplest foundations to the most advanced features.

Use of Remote Sensing to Estimate Paddy Area and Production

Lea Rotairo,Asian Development Bank,2019 A substantial portion of the world s rice is produced and consumed in the Asia and

Pacific region As much of the region s population depends on rice farming for consumption and livelihood the demand for good quality statistics remains essential for effective policy formulation Recent advances in remote sensing serve as a viable alternative to traditional methods of compiling agricultural statistics by responding to the emerging data requirements and overall needs of modern agriculture especially for staple commodities such as rice This publication outlines the procedures methods and tools developed for generating statistics on paddy rice area and production using remote sensing and GIS techniques It is intended to encourage and assist national statistical systems in piloting and adopting satellite based techniques as an alternative to existing data collection methods while enabling other interested readers to comprehend whether the adoption of these methodologies can improve the quality and timeliness of agricultural statistics The handbook also serves as a complement to a massive online open course developed by ADB for crop area estimation

ShakeCast

Loren L. Turner,David Jay Wald,Kuo-wan Lin,2009 Following a major earthquake one of Caltrans most critical tasks is to assess the condition of all potentially impacted bridges and roadway corridors in the state highway system Timely response is important to ensure public safety guide emergency vehicle traffic and re establish critical lifeline routes In the past bridge inspection teams had difficulties setting priorities immediately following an earthquake because they lacked precise information about where the worst shaking and most likely the greatest damage had occurred In 2005 Caltrans initiated a contract with the United States Geological Survey USGS to develop and implement a Caltrans specific version of their ShakeCast system a post event software analysis tool that was anticipated to change the way Caltrans responds following a major earthquake ShakeCast is a web based application that automatically retrieves measured earthquake shaking data analyzes it against individual bridge performance characteristics and generates inspection prioritization emails and other web based products for emergency responders within minutes of an event Benefits have already been realized over the course of the test deployment phase The ShakeCast system has proved to be a valuable tool for post earthquake response for Caltrans during real events as well as for scenario planning exercises
