Applied Nonlinear Control Jean-Jacques E. Slotine, Weiping Li, 1991 Nonlinear systems analysis Phase plane analysis Fundamentals of Lyapunov theory Advanced stability theory Describing function analysis Nonlinear control systems design Feedback linearization Sliding control Adaptive control Control of multi input physical systems **Zhang-Gradient Control**

Yunong Zhang, Binbin Qiu, Xiaodong Li, 2020-11-24 This book introduces readers to using the simple but effective Zhang gradient ZG method to solve tracking control problems concerning various nonlinear systems while also highlighting the applications of the ZG method to tracking control for practical systems e.g. an inverted pendulum on a cart IPC system and a two wheeled mobile robot showing its potential applications In addition to detailed theoretical analyses of ZG controllers the book presents a wealth of computer simulations to demonstrate the feasibility and efficacy of the controllers discussed as well as the method itself More importantly the superiority of ZG controllers in overcoming the division by zero DBZ problem is also illustrated Given its scope and format the book is well suited for undergraduate and graduate students as well as academic and industrial researchers in the fields of neural dynamics neural networks nonlinear control computer mathematics time varying problem solving modeling and simulation analog hardware and robotics *High Performance Computing for Computational Science - VECPAR 2004* Michel Daydé, 2005-04-28 This book constitutes the thoroughly refereed post proceedings of the 6th International Conference on High Performance Computing for Computational Science VECPAR 2004 held in Valencia Spain in June 2004 The 48 revised full papers presented together with 5 invited papers were carefully selected during two rounds of reviewing and improvement from initially 130 contributions The papers are organized in topical sections on large scale computations data management and data mining GRID computing infrastructure cluster computing parallel and distributed computing and computational linear and non linear algebra **Proceedings of the ASME Dynamic Systems and Control Division**, 1998 **Task-Space Sensory Feedback Control of Robot Manipulators** Chien Chern Cheah, Xiang Li, 2015-04-09 This book presents recent advances in robot control theory on task space sensory feedback control of robot manipulators By using sensory feedback information the robot control systems are robust to various uncertainties in modelling and calibration errors of the sensors Several sensory task space control methods that do not require exact knowledge of either kinematics or dynamics of robots are presented Some useful methods such as approximate Jacobian control adaptive Jacobian control region control and multiple task space regional feedback are included These formulations and methods give robots a high degree of flexibility in dealing with unforeseen changes and uncertainties in its kinematics and dynamics which is similar to human reaching movements and tool manipulation It also leads to the solution of several long standing problems and open issues in robot control such as force control with constraint uncertainty control of multi fingered robot hand with uncertain contact points singularity issue of Jacobian matrix global task space control which are also presented in this book The target audience for this book includes scientists engineers and

practitioners involved in the field of robot control theory

Adaptive Systems in Control and Signal Processing 1995
Cs. Banyasz, 2014-05-23 Leading academic and industrial researchers working with adaptive systems and signal processing have been given the opportunity to exchange ideas concepts and solutions at the IFAC Symposia on Adaptive Systems in Control and Signal Processing This postprint volume contains all those papers which were presented at the 5th IFAC Symposium in Budapest in 1995 The technical program was composed of a number of invited and contributed sessions and a special case study session providing a good balance between applications and theory oriented papers

Robust Engineering Designs of Partial Differential Systems and Their Applications Bor-Sen Chen, 2021-12-22 Most systems in science engineering and biology are of partial differential systems PDSs modeled by partial differential equations Many books about partial differential equations have been written by mathematicians and mainly address some fundamental mathematic backgrounds and discuss some mathematic properties of partial differential equations Only a few books on PDSs have been written by engineers however these books have focused mainly on the theoretical stabilization analysis of PDSs especially mechanical systems This book investigates both robust stabilization control design and robust filter design and reference tracking control design in mechanical signal processing and control systems to fill a gap in the study of PDSs Robust Engineering Designs of Partial Differential Systems and Their Applications offers some fundamental background in the first two chapters The rest of the chapters focus on a specific design topic with a corresponding deep investigation into robust H filtering stabilization or tracking design for more complex and practical PDSs under stochastic fluctuation and external disturbance This book is aimed at engineers and scientists and addresses the gap between the theoretical stabilization results of PDSs in academic and practical engineering designs more focused on the robust H filtering stabilization and tracking control problems of linear and nonlinear PDSs under intrinsic random fluctuation and external disturbance in industrial applications Part I provides backgrounds on PDSs such as Galerkin s and finite difference methods to approximate PDSs and a fuzzy method to approximate nonlinear PDSs Part II examines robust H filter designs for the robust state estimation of linear and nonlinear stochastic PDSs And Part III treats robust H stabilization and tracking control designs of linear and nonlinear PDSs Every chapter focuses on an engineering design topic with both theoretical design analysis and practical design examples

Neural Network Solution and Analysis of the Inverse Kinematics Problem Ziqiang Mao, 1995

Analog and Digital Control System Design Chi-Tsong Chen, 1993 This text s contemporary approach focuses on the concepts of linear control systems rather than computational mechanics Straightforward coverage includes an integrated treatment of both classical and modern control system methods The text emphasizes design with discussions of problem formulation design criteria physical constraints several design methods and implementation of compensators Discussions of topics not found in other texts such as pole placement model matching and robust tracking add to the text s cutting edge presentation Students will appreciate the applications and discussions of practical aspects including the leading problem in

developing block diagrams noise disturbances and plant perturbations State feedback and state estimators are designed using state variable equations and transfer functions offering a comparison of the two approaches The incorporation of MATLAB throughout the text helps students to avoid time consuming computation and concentrate on control system design and analysis
