Advanced Calculus is intended as a text for courses that furnish the backbone of the student s undergraduate education in mathematical analysis The goal is to rigorously present the fundamental concepts within the context of illuminating examples and stimulating exercises This book is self contained and starts with the creation of basic tools using the completeness axiom The continuity differentiability integrability and power series representation properties of functions of a single variable are established The next few chapters describe the topological and metric properties of Euclidean space These are the basis of a rigorous treatment of differential calculus including the Implicit Function Theorem and Lagrange Multipliers for mappings between Euclidean spaces and integration for functions of several real variables Special attention has been paid to the motivation for proofs Selected topics such as the Picard Existence Theorem for differential equations have been included in such a way that selections may be made while preserving a fluid presentation of the essential material Supplemented with numerous exercises Advanced Calculus is a perfect book for undergraduate students of analysis **Solutions Manual to**

Homotopy Analysis Method in Nonlinear Differential Equations Shijun Liao,2012-06-22 Homotopy Analysis Method in Nonlinear Differential Equations presents the latest developments and applications of the analytic approximation method for highly nonlinear problems namely the homotopy analysis method HAM Unlike perturbation methods the HAM has nothing to do with small large physical parameters In addition it provides great freedom to choose the equation type of linear sub problems and the base functions of a solution Above all it provides a convenient way to guarantee the convergence of a solution This book consists of three parts Part I provides its basic ideas and theoretical development Part II presents the HAM based Mathematica package BVPh 1 0 for nonlinear boundary value problems and its applications Part III shows the validity of the HAM for nonlinear PDEs such as the American put option and resonance criterion of nonlinear travelling waves New solutions to a number of nonlinear problems are presented illustrating the originality of the HAM Mathematica codes are freely available online to make it easy for readers to understand and use the HAM This book is suitable for researchers and postgraduates in applied mathematics physics nonlinear mechanics finance and engineering Dr Shijun Liao a distinguished professor of Shanghai Jiao Tong University is a pioneer of the HAM **Solutions Manual and**
