

Planning diagrams

Having considered previous issues in relation to the master designer and synthesised the information gathered to produce a brief diagram that establishes the appropriate spaces and their size, shape and relationship to each other. In addition their location, at this stage, is an understanding of the quality of space required for each activity – a need for daylight or exposure, for example. The result is the planning diagram, which sets out the criteria that the master's spatial requirements must satisfy. As design work progresses

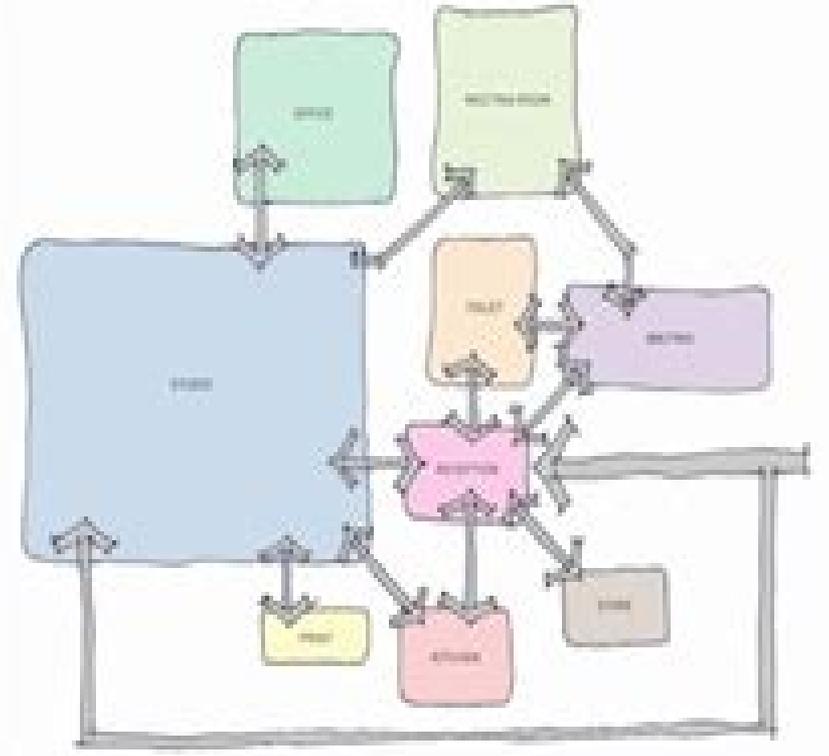

and the master's planning is developed, the designer should be able to test the spatial requirements of the building against the planning diagram to ensure that the proposed scheme satisfies the required criteria.

Although the planning diagram is an important part of the design process, it is important to remember that it is not a building plan. When detailed building plans are developed from the master planning diagram, the final planning measures will be determined by the quality of the site and the conceptual plan of the project.

Note

Establishing design criteria involves identifying the requirements relating to the relationship of spaces, and for an early stage of space.

-  Architectural Development Criteria
-  Master's Response
-  Working Model
-  Detail Development
-  Site Development
-  Working Plan
-  Brief
-  Plan
-  Section
-  Elevation

Note

The planning diagram establishes an idea model of how the master's spatial requirements should work. It is not intended against the design process to ensure that each of the envisaged spaces has been included and that their size, shape and relationship to each other will allow the building to function as required. If all these conditions are met by the completed scheme, then a good degree of integration will satisfy the size and relationship of the project brief.
