Applications with OpenAI and Google SDKs Raymond Tech, 2026-01-23 Unlock the full power of the AI revolution and transform your skills from an API consumer into a world class AI architect with the most comprehensive development guide ever published Building AI Applications with OpenAI and Google SDKs is the definitive all in one resource for designing integrating and scaling next generation intelligent systems Whether you are a software engineer looking to modernize your stack a tech entrepreneur building the next great AI startup or a developer transitioning into the world of agentic workflows this book provides a step by step roadmap from foundational SDK calls to complex autonomous multi modal systems Inside you will discover how to Master the Ecosystems Navigate the OpenAI and Google SDKs with professional grade proficiency understanding the strategic advantages of models like GPT 4o and Gemini 1.5 Pro Build with Memory Implement sophisticated Retrieval Augmented Generation RAG pipelines using vector databases to give your AI access to private real time data Create Autonomous Agents Design agentic workflows using function calling and tool use allowing your applications to reason plan and execute actions across the web and third party APIs Harness Multi modality Develop applications that can see hear and speak by integrating native vision audio and video analysis directly into your code Engineer for Production Deploy debug and scale AI systems with confidence using LLMops best practices evaluation frameworks and cost optimization strategies Bridge the Context Gap Leverage Google's massive context windows and OpenAI's structured outputs to handle complex data at an enterprise scale Unlike fragmented tutorials or surface level guides this book delivers a complete architectural journey blending authoritative technical expertise with approachable hands on projects You won't just learn to call an API you will master the art of building intelligence as a service

[Generative AI Handbook](#) Marc Rolland, 2026-02-02 What if the generative AI systems reshaping enterprise decision making rest on theoretical foundations that computer scientists themselves have never fully agreed upon Most technical handbooks treat large language models as inevitable technologies awaiting routine optimization This volume confronts a more complex reality generative AI arrives as an unresolved intellectual inheritance decades of argument between symbolic reasoning and statistical induction compressed into production pipelines Foundation models demonstrate competence without comprehension absorb historical contradictions without adjudication and optimize for fluency while remaining indifferent to truth They are neither neutral tools nor autonomous agents but artifacts of accumulated human language filtered through objectives that care nothing for coherence unless explicitly constrained You will find no simplified tutorials promising effortless implementation Instead you encounter the architectural tensions practitioners prefer to ignore whether attention mechanisms constitute genuine interpretability or mere optimization convenience when fine tuning crosses from adaptation into epistemological distortion how retrieval augmented generation reintroduces the very brittleness that end to end learning sought to eliminate Examine why transformer architectures internalize competing ideological frames and linguistic norms without mechanism for resolving their inherent contradictions Confront the unresolved epistemological cost of reframing language from formal rule

systems to probabilistic distributions Navigate the scholarly schism over whether foundation models represent compressed cultural memory or alien artifacts lacking normative commitment Architect enterprise pipelines while acknowledging that safety constraints oscillate between prudent caution and problematic overreach Evaluate deployment strategies when empirical evidence shows attention weights frequently fail to track genuine causal influence Question whose epistemic authority speaks when models generate answers the optimizer the dataset or an emergent statistical consensus belonging to no tradition For senior architects and technical leaders prepared to own the conceptual debts embedded in their systems rather than obscure them behind abstraction layers Build enterprise AI responsibly begin by interrogating what remains fundamentally contested
