Mathematics Schemes Of Work:

Developing a Scheme of Work for Primary Mathematics Sue Atkinson,1996 A scheme of work has been described as an essential part of teaching by the National Curriculum Council and all schools are working to adapt to this concept This handbook seeks to show primary teachers how to develop a scheme of work for primary maths It goes on to translate the ideas in the scheme of work in to successful classroom practice and shows teachers why a scheme of work is not only an essential tool but also an aid to delivering the National Curriculum for maths It also includes examples of schemes of work from schools around the country Primary Mathematics Schemes of Work Buckinghamshire (England). A National Curriculum for the Early Years Angela Anning,1995 What does the National Curriculum mean to pupils and teachers at Key Stage One How have teachers and children coped with the ongoing changes and how has subject teaching altered in infant classrooms In A National Curriculum for the Early Years Angela Anning and her team of contributors set out to examine these issues Infant teachers and their pupils were the guinea pigs for the introduction of the National Curriculum over a five year period Despite many reservations about a subject based curriculum for young children teachers struggled to interpret the National Curriculum Orders into a workable if not manageable curriculum in their classrooms Together the contributors provide a timely analysis of subject discipline based education for young children and look ahead to the prospects for those subjects at Key Stage One in the second half of the 1990s This book will be essential reading for anyone involved in the education of young children

Mathematics in the Early Years David Clemson,2006-11-22 The Clemsons clear and readable book takes the reader from debates about how children learn and what children know and can do when they start school through to a discussion of how mathematics can be managed assessed and evaluated in the school and classroom Linking these two parts of the book is a section on the subject of mathematics itself from which the non specialist reader can gain a view of what mathematics is what needs to be thought about in planning and offering a curriculum and the special dilemmas faced in teaching and learning mathematics as a subject A bank of case studies offers an opportunity to see mathematics in action in a variety of classrooms
