**Multimedia Networks** Hans W. Barz, Gregory A. Bassett, 2016-03-21 The transportation of multimedia over the network requires timely and errorless transmission much more strictly than other data This had led to special protocols and to special treatment in multimedia applications telephony IP TV streaming to overcome network issues This book begins with an overview of the vast market combined with the user s expectations The base mechanisms of the audio video coding H 26x etc are explained to understand characteristics of the generated network traffic Further chapters treat common specialized underlying IP network functions which cope with multimedia data in conjunction which special time adaption measures Based on those standard functions these chapters can treat uniformly SIP H 248 High End IP TV Webcast Signage etc A special section is devoted to home networks which challenge high end service delivery due to possibly unreliable management The whole book treats concepts described in accessible IP based standards and which are implemented broadly The book is aimed at graduate students practitioners with good basic knowledge in computer networking It provides the reader with all concepts of currently used IP technologies of how to deliver multimedia efficiently to the end user

Bassett, 2016 Multimedia Communications: Applications, Networks, Protocols And Standards Halsall, 2001-09 *Design of Reservation Protocols for Multimedia Communication* Luca Delgrossi, 2012-12-06 The advent of multimedia technology is creating a number of new problems in the fields of computer and communication systems Perhaps the most important of these problems in communication and certainly the most interesting is that of designing networks to carry multimedia traffic including digital audio and video with acceptable quality The main challenge in integrating the different services needed by the different types of traffic into the same network an objective that is made worthwhile by its obvious economic advantages is to satisfy the performance requirements of continuous media applications as the quality of audio and video streams at the receiver can be guaranteed only if bounds on delay delay jitters bandwidth and reliability are guaranteed by the network Since such guarantees cannot be provided by traditional packet switching technology a number of researchers and research groups during the last several years have tried to meet the challenge by proposing new protocols or modifications of old ones to make packet switching networks capable of delivering audio and video with good quality while carrying all sorts of other traffic The focus of this book is on HeiTS the Heidelberg Transport System and its contributions to integrated services network design The HeiTS architecture is based on using the Internet Stream Protocol Version 2 ST II at the network layer The Heidelberg researchers were the first to implement ST II The author documents this activity in the book and provides thorough coverage of the improvements made to the protocol The book also includes coverage of HeiTP as used in error handling error control congestion control and the full specification of ST2 a new version of ST II The ideas and techniques implemented by the Heidelberg group and their coverage in this volume apply to many other approaches to multimedia networking **Proceedings of the ...**
