Multivariate Data Analysis In Practice Esbensen:

Multivariate Data Analysis Kim H. Esbensen, Dominique Guyot, Frank Westad, Lars P. Houmoller, 2002 Multivariate Data Analysis in practice adopts a practical non mathematical approach to multivariate data analysis The book s principal objective is to provide a conceptual framework for multivariate data analysis techniques enabling the reader to apply these in his or her own field Features Focuses on the practical application of multivariate techniques such as PCA PCR and PLS and experimental design Non mathematical approach ideal for analysts with little or no background in statistics Step by step introduction of new concepts and techniques promotes ease of learning Theory supported by hands on exercises based on real world data A full training copy of The Unscrambler for Windows 95 Windows NT 3 51 or later versions including data sets for the exercises is available Tutorial exercises based on data from real world applications are used throughout the book to illustrate the use of the techniques introduced providing the reader with a working knowledge of modern multivariate data analysis and experimental design All exercises use The Unscrambler a de facto industry standard for multivariate data analysis software packages Multivariate Data Analysis in Practice is an excellent self study text for scientists chemists and engineers from all disciplines non statisticians wishing to exploit the power of practical multivariate methods It is very suitable for teaching purposes at the introductory level and it can always be supplemented with higher level theoretical literature R sum de l diteur *Process Analytical Technology* Katherine A. Bakeev, 2010-04-01 Process Analytical Technology explores the concepts of PAT and its application in the chemical and pharmaceutical industry from the point of view of the analytical chemist In this new edition all of the original chapters have been updated and revised and new chapters covering the important topics of sampling NMR fluorescence and acoustic chemometrics have been added Coverage includes Implementation of Process Analytical Technologies UV Visible Spectroscopy for On line Analysis Infrared Spectroscopy for Process Analytical Applications Process Raman Spectroscopy Process NMR Spectroscopy Technology and On line Applications Fluorescent Sensing and Process Analytical Applications Chemometrics in Process Analytical Technology PAT On Line PAT Applications of Spectroscopy in the Pharmaceutical Industry Future Trends for PAT for Increased Process Understanding and Growing Applications in Biomanufacturing NIR Chemical Imaging This volume is an important starting point for anyone wanting to implement PAT and is intended not only to assist a newcomer to the field but also to provide up to date information for those who practice process analytical chemistry and PAT It is relevant for chemists chemical and process engineers and analytical chemists working on process development scale up and production in the pharmaceutical fine and specialty chemicals industries as well as for academic chemistry chemical engineering chemometrics and pharmaceutical science research groups focussing on PAT Review from the First Edition The book provides an excellent first port of call for anyone seeking material and discussions to understand the area better It deserves to be found in every library that serves those who are active in the field of Process Analytical Technology Current Engineering Practice *Progress in*

Chemometrics Research Alexey L. Pomerantsev, 2005 Chemometrics is the chemical discipline that uses mathematical statistical and other methods employing formal logic to design or select optimal measurement procedures and experiments and to provide maximum relevant chemical information by analysing chemical data Being conceived as a branch of analytical chemistry chemometrics now is a general approach It extracts relevant information out of measured data regardless of their origin chemical physical biological etc Chemometrics has been applied in different areas and most successfully in multivariate calibration pattern recognition classification and discriminant analysis multivariate modelling and monitoring of processes The main chemometric principle is a concept of hidden data structures that can be found using methods of multivariate data analysis These are the well known statistic tools such as partial least squares PLS soft independent modelling of class analogy SIMCA principal component regression PCR wavelet analysis and many others Current activities of chemometricians fall into two main categories 1 development of new methods for manipulating multivariate data and 2 new applications of the known chemometric techniques in different areas such as environment control food industry agriculture medicine and engineering
