35 Gbps FPGA-based Network Processor Rui Pang,University of Texas at Dallas. Graduate Program in Electrical Engineering,2012 With the need for packet processing in high throughput networks and the higher expense for high performance network processor low cost programmable Network Processors on FPGAs are gaining attention We utilize a hash function small size parallel CAMs and an external RAM to implement a high performance 35 Gbps network processor to handle 524 288 flows FPGAs are chosen to realize reconfigurable network processors for executing field upgrade In this thesis a hash function is proposed and implemented to analyze and route incoming packets to specific CAM architectures at high speed with low overhead To match incoming packets with pre stored flows a parallel structure of CAMs is proposed to meet the high speed requirements In order to provide a low cost and low power consuming solution an external RAM is used instead of large size expensive CAMs to store a large amount of information on flows at a fraction of the cost compared to the CAM Intel Internet Exchange

Architecture and Applications Bill Carlson,2003 This invaluable developer resource provides an overview of Intel Internet Exchange Architecture IXA educates developers about Intel network processors and provides an in depth technical view of the standards required by hardware and software developers of next generation OEM networking equipment The text is well suited not only for hardware and software engineers but also for users outside the industry such as management sales marketing and support professionals The architecture of a typical network core or edge is described to provide a context for the network processor architecture This guide also explores the architecture of the Intel IXP2400 and Intel IXP2800 network processors and provides a detailed example of a DSLAM using the multiprotocol software framework Using IXP2400/2800 Development Tools Donald F.
