

Non linear static pushover analysis

- Pushover is a static-nonlinear analysis method where a structure is subjected to gravity loading and a monotonic displacement-controlled lateral load pattern
- Lateral load may represent the range of base shear induced by earthquake loading
- Output generates a static-pushover curve which plots a strength-based parameter against deflection.
- For example, performance may relate the strength level achieved in certain members against displacement at the top of the structure
- Results provide information about ductile capacity of the structural system and indicate the mechanism, load level and deflection at which failure occurs
