*Handbook of Portfolio Construction* John B. Guerard, Jr.,2009-12-12

Portfolio construction is fundamental to the investment management process. In the 1950s Harry Markowitz demonstrated the benefits of efficient diversification by formulating a mathematical program for generating the efficient frontier to summarize optimal trade offs between expected return and risk. The Markowitz framework continues to be used as a basis for both practical portfolio construction and emerging research in financial economics. Such concepts as the Capital Asset Pricing Model (CAPM) and the Arbitrage Pricing Theory (APT) for example provide the foundation for setting benchmarks for predicting returns and risk and for performance measurement. This volume showcases original essays by some of today's most prominent academics and practitioners in the field on the contemporary application of Markowitz techniques. Covering a wide spectrum of topics including portfolio selection, data mining, tests and multi-factor risk models, the book presents a comprehensive approach to portfolio construction tools, models, frameworks and analyses with both practical and theoretical implications.

**Practical Business Statistics** Andrew F. Siegel, 1994. Practical Business Statistics 5e was written in response to instructors not wanting a formula-driven, mathematically encyclopedic book. The use of computer applications means some topics no longer require coverage in detail. This allows future managers to know how to use and understand statistics. The text does this by using examples with real data that relate to the functional areas of business such as finance, accounting and marketing. It de-emphasizes the theoretical and presents the material in a well-written, easy style designed to motivate students. The emphasis is on understanding and applications as opposed to mathematical precision and formula detail.
