are worried about how buildings and open space shape our interactions with the world Urban economy as well deals with socioeconomic interactions in a spatial context A better understanding about how the built environment affects our behavior thoughts emotions and well being can help design buildings that support both mind and body We welcome original research papers case studies theoretical explorations and innovative design approaches that explore the interplay between the extended mind theory and the design of human environments Topics of interest include but are not limited to Conceptual frameworks linking the extended mind theory and environmental design The influence of external artifacts and of the biotic component of the urban system on cognition and perception in architectural and urban contexts Ethical considerations related to cognitive augmentation through the built environment Innovative design strategies that embrace the extended mind concept User centered approaches to designing spaces that facilitate cognitive extensions Technological advancements and their impact on cognitive interactions within designed environments The role of culture context and individual differences in shaping cognitive extensions The relation among cognitive representation of the urban space and socioeconomic interactions
