Operations Methods Kenneth A. Shaw, 2015-11-11 Updated to integrate the management of associated information processes expand some application discussions and provide additional reference material the intent of this monograph is to help business professionals use waiting line queuing analysis methods to improve both service and manufacturing business applications of queuing situations Emphasis is given to discussing the caveats in applying waiting line theory and becoming aware of the assumptions used in developing that theory The importance of accounting for variability in waiting line processes is discussed in some detail because the basic queuing equations provide only average performance data under steady state conditions Understanding how much variability can exist for a given waiting line scenario provides a manager with the insight required to reduce these effects and develop innovative solutions for improving service while reducing operating costs In general the mathematical tone of the book is focused on applications not the derivation of the formulas presented The few derivation exceptions illustrate some approaches not commonly discussed in textbooks for example the use of state diagrams and random number approximations of the probability distributions for use in simple simulation models To aid in understanding the material presented some practical examples are given at appropriate points in the text and some simulation approaches using common spreadsheet software are described

Design for Stability in Transport Logistics - Definition, Concepts and Evaluation Kunert, Christoph, 2018-08-01. Lean management describes a set of methods combined with a management philosophy which aims at eliminating waste in logistics processes. In production logistics lean is already widespread and applied successfully. Research has shown that lean also works in a warehousing environment. In transport logistics lean is still at a low level of maturity in both research and practice. This work contributes to closing this gap by introducing Heijunka leveling to transport logistics.
