

INTRODUCTION TO COASTAL NAVIGATION

“And after this sort he proceedeth from place to place until he arrive unto his desired porte, which is a conclusion infallible if there be no other impediments (whereof there hath been good consideration had) which may breed error, for from such negligence may arise many inconveniences.”

On a long ocean passage, for example, it may suffice to determine the vessel's position only once or twice a day, and to within a margin of uncertainty of several square miles. A well-found oceangoing vessel may afford the navigator a dry workstation, and numerous electronic aids, such as the *Global Positioning System* (GPS) receiver and radar. A passing vessel would be a curiosity in seldom traveled waters, rather than an object for collision-avoidance maneuvers. In coastal waters, particularly in narrow channels, position fixes might be required every 5 to 15 minutes, and required accuracy limits could well be measured in yards. The navigator's workspace could be
