

# Maximum Likelihood Estimation (MLE)

**Problems :** MVU estimator does not often exist or cannot be found.  
BLUE is restricted to linear models.

**Maximum Likelihood Estimator (MLE) :**

- can always be applied if the PDF is known ;
- is optimal for large data size ;
- is computationally complex and requires numerical methods.

**Basic Idea :** Choose the parameter value that makes the *observed data*, the most likely data to have been observed.

**Likelihood Function :** is the PDF  $p(x; \theta)$  when  $\theta$  is regarded as a variable

**ML Estimate :** is the value of  $\theta$  that maximizes the likelihood function.

$$\hat{\theta} = \arg \max_{\theta} p(\mathbf{x}; \theta)$$

**Lectures on Algebraic Statistics** Mathias Drton, Bernd Sturmfels, Seth Sullivant, 2009-04-25 How does an algebraic geometer studying secant varieties further the understanding of hypothesis tests in statistics Why would a statistician working on factor analysis raise open problems about determinantal varieties Connections of this type are at the heart of the new field of algebraic statistics In this field mathematicians and statisticians come together to solve statistical inference problems using concepts from algebraic geometry as well as related computational and combinatorial techniques The goal of these lectures is to introduce newcomers from the different camps to algebraic statistics The introduction will be centered around the following three observations many important statistical models correspond to algebraic or semi algebraic sets of parameters the geometry of these parameter spaces determines the behaviour of widely used statistical inference procedures computational algebraic geometry can be used to study parameter spaces and other features of statistical models

*Maximum Likelihood Estimation and Inference* Russell B. Millar, 2011-07-26 This book takes a fresh look at the popular and well established method of maximum likelihood for statistical estimation and inference It begins with an intuitive introduction to the concepts and background of likelihood and moves through to the latest developments in maximum likelihood methodology including general latent variable models and new material for the practical implementation of integrated likelihood using the free ADMB software Fundamental issues of statistical inference are also examined with a presentation of some of the philosophical debates underlying the choice of statistical paradigm Key features Provides an accessible introduction to pragmatic maximum likelihood modelling Covers more advanced topics including general forms of latent variable models including non linear and non normal mixed effects and state space models and the use of maximum likelihood variants such as estimating equations conditional likelihood restricted likelihood and integrated likelihood Adopts a

practical approach with a focus on providing the relevant tools required by researchers and practitioners who collect and analyze real data Presents numerous examples and case studies across a wide range of applications including medicine biology and ecology Features applications from a range of disciplines with implementation in R SAS and or ADMB Provides all program code and software extensions on a supporting website Confines supporting theory to the final chapters to maintain a readable and pragmatic focus of the preceding chapters This book is not just an accessible and practical text about maximum likelihood it is a comprehensive guide to modern maximum likelihood estimation and inference It will be of interest to readers of all levels from novice to expert It will be of great benefit to researchers and to students of statistics from senior undergraduate to graduate level For use as a course text exercises are provided at the end of each chapter
