$y - k = m(x - h)$  where  $m$  is the slope of the line and  $(h, k)$  is a point on the line any point works to write an equation in point slope form given a graph of that equation first determine the slope by picking two points then pick any point on the line and write it as an ordered pair  $(h, k)$

point slope is a specific form of linear equations in two variables  $y - b = m(x - a)$  when an equation is written in this form  $m$  gives the slope of the line and  $(a, b)$  is a point the line passes through this form is derived from the slope formula want to learn more about point slope form check out this video
