Mathematical Reviews, 2003 *Introduction to Surface and Superlattice Excitations* Michael G. Cottam, D.R. Tilley, 2019-05-07 Cottam and Tilley provide an introduction to the properties of wave like excitations associated with surfaces and interfaces The emphasis is on acoustic optic and magnetic excitations and apart from one section on liquid surfaces the text concentrates on solids The important topic of superlattices is also discussed in which the different kinds of excitation are considered from a unified point of view Throughout the book the authors are careful to relate theory and

experiment and all of the most important experimental techniques are described The theoretical treatment assumes only a knowledge of undergraduate physics except for Green function methods that are used in a few sections these methods are developed in an appendix The book also contains extensive references enabling the reader to consult the research and review literature Each of the main chapters contains problems to allow the reader to develop topics presented in the text

Indian National Bibliography B. S. Kesavan,2017 *Handbook of Remote Biometrics* Massimo Tistarelli,Stan Z. Li,Rama Chellappa,2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements One of the main limitations of the precursors of today's biometrics which is still present in the vast majority of the existing biometric systems has been the need to keep the device in close contact with the subject to capture the biometric measurements This clearly limits the applicability and convenience of biometric systems This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics IAPR TC4 The last four chapters of the book are derived from some of the best presentations by the participating students of the school The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics
