**Casting Design and Performance**, 2009 *Data-Driven Optimization of Manufacturing Processes* Kalita, Kanak, Ghadai, Ranjan Kumar, Gao, Xiao-Zhi, 2020-12-25 All machining processes are dependent on a number of inherent process parameters. It is of the utmost importance to find suitable combinations to all the process parameters so that the desired output response is optimized. While doing so may be nearly impossible or too expensive by carrying out experiments at all possible combinations, it may be done quickly and efficiently by using computational intelligence techniques. Due to the versatile nature of computational intelligence techniques, they can be used at different phases of the machining process design and optimization process. While powerful machine learning methods like gene expression programming GEP, artificial neural network ANN, support vector regression SVM, and more can be used at an early phase of the design and optimization process to act as predictive models for the actual experiments, other metaheuristic-based methods like cuckoo search, ant colony optimization, particle swarm optimization, and others can be used to optimize these predictive models to find the optimal process parameter combination. These machining and optimization processes are the future of manufacturing. *Data-Driven Optimization of Manufacturing Processes* contains the latest research on the application of state-of-the-art computational intelligence techniques from both predictive modeling and optimization viewpoints in both soft computing approaches and machining processes. The chapters provide solutions applicable to machining or manufacturing process problems and for optimizing the problems involved in other areas of mechanical, civil, and electrical engineering, making it a valuable reference tool. This book is addressed to engineers, scientists, practitioners, stakeholders, researchers, academicians, and students interested in the potential of recently developed powerful computational intelligence techniques towards improving the performance of machining processes. *Advances in Material Sciences and Engineering* Mokhtar Awang, Seyed Sattar Emamian, Farazila Yusof, 2019-09-19 This book presents selected papers from the 4th International Conference on Mechanical Manufacturing and Plant Engineering ICMMPE 2018, which was held in Melaka, Malaysia, from the 14th to the 15th of November 2018. The proceedings discuss genuine problems concerning joining technologies that are at the heart of various manufacturing sectors. In addition, they present the outcomes of experimental and numerical works addressing current problems in soldering, arc welding, and solid state joining technologies. **Nanotechnologies in Green Chemistry and Environmental Sustainability** Samsul Ariffin Abdul Karim, 2022-12-09 Nanotechnologies represent a fast-growing market, and this unique volume highlights the current studies in applied sciences on the sustainability of green science and technology. The chapters include modelling, machine learning, nanotechnology, nanofluids, nanosystems, smart materials, and applications, and solar and fuel cells technology. The authors cover simulation, additive manufacturing, machine learning, and the autonomous system. Various aspects of green science, as well as transdisciplinary topics between fundamental science and engineering, are presented. The book is suitable for all postgraduates and researchers working in this rapid
