

# Human Genetics Lab

**Exploring Human Genetics**

Genetics is the study of how traits are passed from parents to offspring. In this lab, you will explore the inheritance of a specific trait (e.g., eye color) and use a Punnett square to predict the possible genotypes and phenotypes of offspring.

**Procedure:**

- Identify the trait and the alleles involved.
- Construct a Punnett square for the cross.
- Calculate the probability of each genotype and phenotype.
- Collect data from a real-world example (e.g., a family pedigree).
- Perform a chi-square analysis to test the fit of the observed data to the expected results.

Genotype	Phenotype	Probability
AA	Blue eyes	1/4
Aa	Blue eyes	2/4
Aa	Blue eyes	2/4
aa	Brown eyes	1/4

**Chi-Square Analysis:**

Use the following formula to calculate the chi-square value:

$$\chi^2 = \sum \frac{(O - E)^2}{E}$$

Where O is the observed frequency and E is the expected frequency.

Compare the calculated chi-square value to the critical value from the chi-square distribution table to determine if the observed data significantly deviates from the expected results.

Collect data and complete  
chi square analysis
