The Traveling Salesman Problem A Linear Programming:

The Traveling Salesman Problem David L. Applegate,2006 Presents the findings on one of the most intensely investigated subjects in computational mathematics the travelling salesman problem This book describes the method and computer code used to solve a range of large scale problems and demonstrates the interplay of applied mathematics with increasingly powerful computing platforms *A Linear Programming Approach for the Traveling Salesman Problem* Saman Hong,1972

On a Linear-programming-combinatorial Approach to the Traveling-salesman Problem: Notes on Linear Programming and Extensions-part 49 George Bernard Dantzig,1959 A demonstration that the linear programming combinatorial approach wherein simplex multipliers are used in a combinatorial analysis of undominated tours at some stage of the linear programming approach affords a practical way of solving traveling salesman problems *The Traveling Salesman Problem* E.L. Lawler,J.K. Lenstra,A.H.G. Rinnooy Kan,D.B. Shmoys,1985 The Traveling Salesman Problem is central to the area of Combinatorial Optimization and it is through this problem that many of the most important developments in the area have been made This book focuses on essential ideas through them it illustrates all the concepts and techniques of combinatorial optimization concisely but comprehensively The extensive reference list and numerous exercises direct the reader towards related fields and give results Each of the twelve chapters in this volume is concerned with a specific aspect of the Traveling Salesman Problem and is written by an authority on that aspect It is hoped that the book will serve as a state of the art survey of the Traveling Salesman problem which will encourage further investigations and that it will also be useful for its comprehensive coverage of the techniques of combinatorial optimization **The Traveling Salesman Problem** David L.

Applegate,Robert E. Bixby,Vašek Chvátal,William J. Cook,2011-09-19 This book presents the latest findings on one of the most intensely investigated subjects in computational mathematics the traveling salesman problem It sounds simple enough given a set of cities and the cost of travel between each pair of them the problem challenges you to find the cheapest route by which to visit all the cities and return home to where you began Though seemingly modest this exercise has inspired studies by mathematicians chemists and physicists Teachers use it in the classroom It has practical applications in genetics telecommunications and neuroscience The authors of this book are the same pioneers who for nearly two decades have led the investigation into the traveling salesman problem They have derived solutions to almost eighty six thousand cities yet a general solution to the problem has yet to be discovered Here they describe the method and computer code they used to solve a broad range of large scale problems and along the way they demonstrate the interplay of applied mathematics with increasingly powerful computing platforms They also give the fascinating history of the problem how it developed and why it continues to intrigue us **The Traveling Salesman Problem and the Subtour Linear Programming** □□,2017 **The Traveling Salesman Problem and Its Variations** G. Gutin,A.P. Punnen,2006-05-02 A brilliant treatment of a knotty problem in computing This volume contains chapters written by reputable researchers and provides the state of the art in

Moustapha Diaby, Mark H Karwan, 2016-01-28 Combinatorial optimization CO is a topic in applied mathematics decision science and computer science that consists of finding the best solution from a non exhaustive search CO is related to disciplines such as computational complexity theory and algorithm theory and has important applications in fields such as operations research management science artificial intelligence machine learning and software engineering Advances in Combinatorial Optimization presents a generalized framework for formulating hard combinatorial optimization problems COPs as polynomial sized linear programs Though developed based on the traveling salesman problem TSP the framework allows for the formulating of many of the well known NP Complete COPs directly without the need to reduce them to other COPs as linear programs and demonstrates the same for three other problems e g the vertex coloring problem VCP This work also represents a proof of the equality of the complexity classes P polynomial time and NP nondeterministic polynomial time and makes a contribution to the theory and application of extended formulations EFs On a whole Advances in Combinatorial Optimization offers new modeling and solution perspectives which will be useful to professionals graduate students and researchers who are either involved in routing scheduling and sequencing decision making in particular or in dealing with the theory of computing in general *Integer Programming* Harvey M. Salkin, 1975 **Approximation Algorithms for Traveling Salesman Problems Based on Linear Programming Relaxations** Hyung Chan An, 2012 The traveling salesman problem TSP is the problem of finding a shortest Hamiltonian circuit or path in a given weighted graph This problem has been studied in numerous variants and linear programming has played an important role in the design of approximation algorithms for these problems In this thesis we study two versions of the traveling salesman problem and present approximation algorithms for them based on the Held Karp relaxation We first investigate the s t path TSP Hoogeveen showed that the natural variant of Christofides algorithm is a $5/3$ approximation algorithm for this problem this asymptotically tight bound had remained the best approximation ratio known until now We surpass this 20 year old barrier by presenting a deterministic 1.5 approximation algorithm for the s t path TSP for an arbitrary metric The techniques devised in this context can also be applied to other optimization problems including the prize collecting s t path problem and the unit weight graphical metric s t path TSP The integrality gaps of the LP relaxations for all three problems are studied Then we consider the bottleneck asymmetric TSP where the objective is minimizing the bottleneck or maximum length edge cost rather than the total edge cost We present the first nontrivial approximation algorithm for this problem by giving a novel algorithmic technique to shortcut Eulerian circuits while bounding the lengths of the shortcuts needed Building on this framework and the result of Asadpour Goemans Madry Oveis Gharan and Saberi we achieve an $O(\log n \log \log n)$ approximation algorithm We also explore the possibility of improvement upon this result through a comparison to the symmetric counterpart of the problem *Theory of Linear and Integer Programming* A.
