Chemicals from Biomass Debalina Sengupta, Ralph W. Pike, 2012-07-05
Chemicals from Biomass Integrating Bioprocesses into Chemical Production Complexes for Sustainable Development helps engineers optimize the development of new chemical and polymer plants that use

renewable resources to replace the output of goods and services from existing plants It also discusses the conversion of those existing plants into facilities that are based on renewable resources that may require nonrenewable resource supplements Relying on extensive reviews of biomass as feedstock and the production of chemicals from biomass this book identifies and illustrates the design of new chemical processes bioprocesses that use renewable feedstock biomass as raw materials The authors show how these new bioprocesses can be integrated into the existing plant in a chemical production complex to obtain the best combination of energy efficient and environmentally acceptable facilities This presented methodology is an essential component of sustainable development and these steps are essential to achieving a sustainable chemical industry The authors evaluate potential bioprocesses based on a conceptual design of biomass based chemical production and they use Aspen HYSYS and Aspen ICARUS to perform simulations and economic evaluations of these processes The book outlines detailed process designs created for seven bioprocesses that use biomass and carbon dioxide as feedstock to produce a range of chemicals and monomers These include fermentation transesterification anaerobic digestion gasification and algae oil production These process designs and associated simulation codes can be downloaded for modification as needed The methodology presented in this book can be used to evaluate energy efficiency cost sustainability and environmental acceptability of plants and new products Based on the results of that analysis the methodology can be applied to other chemical complexes for new bioprocesses reduced emissions and energy savings

LAURENCE R. WEATHERLEY,2013-10-22 The use of biotechnology in chemical synthesis offers up numerous advantages to the engineer in the process industries but it also presents a number of fundamental challenges and difficulties which impinge directly on separation process requirements The use of biochemical separations has grown significantly during the past decade and is especially used in process industries such as healthcare and food processing However it is becoming increasingly more important in areas such as recycling and waste water treatment and as industry shifts towards cleaner processes biochemical separations will continue to grow The two main objectives of this book are to focus on the application of existing separation process techniques to the recovery and purification of biologically derived products and to examine the state of knowledge of new techniques which have future potential Within these objectives the complexities and breadth of problems associated with biological separations are discussed specific engineering techniques are featured and their adaptation to biochemical separations are highlighted **BIOSPERATIONS** B. SIVASANKAR,2005-01-01 This systematically organized and well balanced book compresses within the covers of a single volume the theoretical principles and techniques involved in bio separations also called downstream processing These techniques are derived from a range of subjects for example physical chemistry analytical chemistry bio chemistry biological science and chemical engineering Organized in its 15 chapters the text covers in the first few chapters topics related to chemical engineering unit operations such as filtration centrifugation adsorption extraction and membrane separation as applied to bioseparations The use of chromatography as practiced at laboratory as well as industrial scale operation and related techniques such as gel filtration affinity and pseudoaffinity chromatography ion exchange chromatography electrophoresis and related methods have been discussed The important applications of these techniques have also been highlighted **Bioseparation Engineering I.**

Endo,T. Nagamune,S. Katoh,T. Yonemoto,2000-03-17 The bioseparation engineering of today includes downstream process engineering such as waste water material and gas treatment Taking this tendency into account bioseparation engineers gathered in Japan as a special research group under the main theme of Recovery and Recycle of Resources to Protect the Global Environment The scope of this book is based on the conference and deals not only with recent advances in bioseparation engineering in a narrow sence but also the environmental engineering which includes waste water treatment and bioremediation The contributors of this book cover many disciplines such as chemical engineering analytical chemistry biochemistry and microbiology Bioseparation Engineering will stimulate young engineers and scientists who will develop

bioseparation engineering further in the 21st century and contribute to a world wide attention to the global environment
