*TECHNOLOGY, AI AND LAW* Sanjana Bharadwaj, 2025-12-25. The accelerating integration of technology and artificial intelligence into almost every sphere of human activity has fundamentally altered the ways in which law is conceived, interpreted, and applied. From algorithmic decision-making and data governance to platform economies, surveillance, and automated justice systems, technological advancement poses profound questions for legal institutions, regulatory frameworks, and constitutional values. It is within this evolving landscape that the present edited volume, *Technology, AI and Law*, seeks to make a meaningful scholarly intervention. This book brings together a diverse range of contributions that critically examine the relationship between law and emerging technologies. The chapters engage with contemporary legal challenges posed by artificial intelligence while remaining grounded in doctrinal analysis, constitutional principles, and normative inquiry. Rather than treating technology as a purely technical phenomenon, the volume situates it within broader questions of rights, accountability, ethics, governance, and social justice. In doing so, it reflects an understanding that legal responses to technological change must be both analytically rigorous and socially responsive. The contributors to this volume, comprising academics, researchers, and legal practitioners, offer perspectives that are theoretically informed and

practically relevant The articles explore issues such as regulatory design algorithmic bias data protection labour and platform governance access to justice and the role of the state in mediating technological power Collectively the chapters underscore the need for law to evolve thoughtfully in response to innovation without compromising fundamental constitutional and human rights commitments Shilpkar Law College Pune is pleased to present this volume as part of its broader commitment to promoting research oriented legal education and scholarly dialogue The institution recognises that legal education must actively engage with emerging domains that shape contemporary governance and public life By supporting academic publications such as this edited book the College seeks to contribute to national and international discourse on law and technology while encouraging critical inquiry and interdisciplinary engagement This volume is intended to serve multiple audiences For scholars and researchers it offers analytical frameworks and critical perspectives on the legal implications of artificial intelligence and technology For students it provides insights into emerging areas of legal study that are increasingly relevant to academic curricula and professional practice For policymakers and practitioners it presents reflections that may inform regulatory thinking and legal reform in a rapidly transforming technological environment The editors extend their sincere appreciation to all contributors for their scholarly rigor intellectual engagement and commitment to academic integrity Gratitude is also due to the reviewers and editorial team whose efforts have ensured the quality and coherence of this volume It is hoped that Technology AI and Law will stimulate further research debate and reflection on how law can respond effectively and ethically to technological change while remaining anchored in the values of justice accountability and the rule of law
