

Study Guide: Answer Key

Chapter 3: Cell Structure and Function

Wonder Drug: How a chance discovery in a London laboratory revolutionized medicine

Driving Question 1:

What structural features are shared by all cells, and what are the key differences between prokaryotic and eukaryotic cells?

Why should you care?

Although bacteria are **prokaryotic cells**, other organisms such as fungi, plants, and humans are made up of **eukaryotic cells**. Why is this important? Prokaryotic organisms, such as bacteria, are everywhere on Earth, including on and inside you. Although some bacteria cause diseases, many are essential to the lives of many other kinds of organisms, including humans. Understanding the differences between eukaryotic cells and prokaryotic cells (such as the presence or absence of a **nucleus** and other **organelles**, or the different structure of **ribosomes** in the two groups) will help you understand the broad world around you.

What should you know?

To fully answer this Driving Question, you should be able to:

1. State the two basic principles of the cell theory.
2. Describe the differences and similarities between prokaryotic and eukaryotic cells.

Infographic Focus:

The infographics most pertinent to the Driving Question are 3.2 and 3.3.

Test Your Vocabulary:

Match the following definitions to the terms they describe:

[ANTIBIOTIC] A chemical that can slow or stop the growth of bacteria; many antibiotics are produced by living organisms.

[CELL THEORY] The concept that all living organisms are made of cells and that cells are formed by the reproduction of existing cells.

[PROKARYOTIC CELLS] Cells that lack internal membrane-bound organelles.

[EUKARYOTIC CELLS] Cells that contain membrane-bound organelles, including a central nucleus.

[ORGANELLES] The membrane-bound compartments of eukaryotic cells that carry out specific functions.

[CELL MEMBRANE] A phospholipid bilayer with embedded proteins that forms the boundary of all cells.

[CYTOPLASM] The gelatinous, aqueous interior of all cells.

[RIBOSOME] A complex of RNA and proteins that carries out protein synthesis in all cells.
