Interdisciplinary Research on Climate and Energy Decision Making M. Granger Morgan, 2022-12-16 This book explores the role and importance of interdisciplinary research in addressing key issues in climate and energy decision making For over 30 years an interdisciplinary team of faculty and students anchored at Carnegie Mellon University joined by investigators and students from a number of other collaborating institutions across North America Europe and Australia have worked together to better understand the global changes that are being caused by both human activities and natural causes This book tells the story of their successful interdisciplinary work With each chapter written in the first person the authors have three key objectives 1 to document and provide an accessible account of how they have framed and addressed a range of the key problems that are posed by the human dimensions of global change 2 to illustrate how investigators and graduate students have worked together productively across different disciplines and locations on common problems and 3 to encourage funders and scholars across the world to undertake similar large scale interdisciplinary research activities to meet the world s largest challenges Exploring topics such as energy efficiency public health and climate adaptation and with a final chapter dedicated to lessons learned this innovative volume will be of great interest to students and scholars of climate change energy transitions and environmental studies more broadly

CLIMATE CHANGE and the road to NET-ZERO Mathew Hampshire-Waugh, 2021-06-01 CLIMATE CHANGE and the road to NET ZERO is a story of how humanity has broken free from the shackles of poverty suffering and war and for the first time in human history grown both population and prosperity It s also a story of how a single species has reconfigured the natural world repurposed the Earth s resources and begun to re engineer the climate The book uses these conflicting narratives to explore the science economics technology and politics of climate change NET ZERO blows away the entrenched idea that solving global warming requires a trade off between the economy and environment present and future generations or rich and poor and reveals why a twenty year transition to a zero carbon system is a win win solution for all on planet Earth Reviews Readers Favorite Five Stars An excellent layman s perspective of the climate problem today how it has evolved over time and the different approaches to solving the problem I recommend it highly Mark Z Jacobson Professor of Civil and Environmental Engineering at Stanford University and author of 100% Clean Renewable Energy and Storage for Everything Mathew brings his wide ranging experience of financial markets particularly in modelling and forecasting to add a unique insight to the climate challenge On one hand helping us understand how fossil fuels drove prosperity and let the world s population escape

the poverty trap whilst on the other how rising levels of CO2 in the atmosphere placed the world at mortal risk In this book Mathew s financial understanding comes to the fore revealing why we need a sound understanding of economics climate science and financial modelling to give us the signals we need to act today Mark Campanale Executive Chairman of the Carbon Tracker Initiative and founder of the unburnable carbon capital markets thesis Provides a clear understanding of the technical complexities of reaching zero carbon Hampshire Waugh approaches the subject with intellectual rigour boundless curiosity and compelling story telling A must read for anyone interested in climate change and net zero Vincent Gilles Chief Investment Officer at Clim8 Invest The book that says it all and answers all questions Backed by data analysis and science Hampshire Waugh explains how climate change if left unchecked threatens to unravel 200 years of human progress But it need not end this way The author shows that building a net zero carbon economy is within human reach through focused innovation riding down the experience curve and reaching scale in clean energy technologies and solutions Mathew shows how we can solve climate change and air pollution whilst driving development in the poorest parts of the world and without compromise for those already accustomed to the highest quality of life Geetu Sharma Founder of AlphasFuture LLC a sustainability focused investment business About the Author Dr Mathew Hampshire Waugh has spent the last decade working as an equity analyst at a global investment bank He has worked with the top executives of many multi billion dollar companies and built relationships with many of the world s largest investment managers Mathew s work centred on forecasting technology trends financial performance and the intrinsic value of companies involved in markets including renewable energy electric cars battery technology and biofuels Prior to his career in the banking industry the author gained his doctorate in materials chemistry from University College London where he worked on novel coatings and nano materials for use in energy saving glazing and solar panel design During his doctorate Mathew registered a patent for an efficiency enhancing coating for solar modules published numerous scientific papers and engaged in public speaking consultancy and media outreach From the Author I wrote Climate Change and the road to Net Zero to provide a generalist reader with a clear comprehensive and objective take on the issues surrounding climate change and air pollution The book walks the reader through a history of energy innovation and the rise of human civilisation how scientists have come to understand our past climate and can now forecast future change the problems economists encounter as they attempt to piece together the potential monetary and social damages from climate inaction and a technology agnostic assessment of potential climate change solutions from climate engineering to mitigation including their costs risks and limitations The book demonstrates why sustainable technologies such as wind solar and batteries get cheaper with scale of production not time and why a rapid transition to a fully fledged net zero system will end up significantly cheaper than remaining bound to fossil fuels whilst also avoiding the worst impacts of climate change and preventing nearly eight million premature deaths each year from air pollution I hope Climate Change and the road to Net Zero delivers an understanding of humanity s relationship with Earth

that is as intriguing as Simon Lewis and Mark Maslin's *The Human Planet* or Yuval Noah Harari's *Sapiens* I very much hope too that the book conveys the passion and call to action of David Wallace Well's *The Uninhabitable Earth* coupled with the sober economic analysis of *The Climate Casino* by William Nordhaus or *Capital in the 21st century* by Thomas Piketty and that it provides the technical rigour of *Sustainable Energy Without The Hot Air* by David MacKay the rationality of Hans Rosling's *Factfulness* and the eternal hope of *The Future We Choose* by Christiana Figueres and Tom Rivett Carnac I believe net zero will be cheaper cleaner safer more reliable more sustainable and will create more employment than if we remain bound to fossil fuels After reading the book I hope you will agree Mathew Hampshire Waugh Author

Prentice Hall Science Explorer: Teacher's ed, 2005 [The Climate Change Challenge and the Failure of Democracy](#) David Shearman, Joseph Wayne Smith, 2007-08-30 This provocative book presents compelling evidence that the fundamental problem behind environmental destruction and climate change in particular is the operation of liberal democracy Climate change threatens the future of civilization but humanity is impotent in effecting solutions Even in those nations with a commitment to reduce greenhouse emissions they continue to rise This failure mirrors those in many other spheres that deplete the fish of the sea erode fertile land destroy native forests pollute

rivers and streams and utilize the world's natural resources beyond their replacement rate. In this provocative book Shearman and Smith present evidence that the fundamental problem causing environmental destruction and climate change in particular is the operation of liberal democracy. Its flaws and contradictions bestow upon government and its institutions laws and the markets and corporations that provide its sustenance an inability to make decisions that could provide a sustainable society. Having argued that democracy has failed humanity the authors go even further and demonstrate that this failure can easily lead to authoritarianism without our even noticing. Even more provocatively they assert that there is merit in preparing for this eventuality if we want to survive climate change. They are not suggesting that existing authoritarian regimes are more successful in mitigating greenhouse emissions for to be successful economically they have adopted the market system with alacrity. Nevertheless the authors conclude that an authoritarian form of government is necessary but this will be governance by experts and not by those who seek power. There are in existence highly successful authoritarian structures for example in medicine and in corporate empires that are capable of implementing urgent decisions impossible under liberal democracy. Society is verging on a philosophical choice between liberty or life. But there is a third way between democracy and authoritarianism that the authors leave for the final chapter. Having brought the reader to the realization that in order to halt or even slow the disastrous process of climate change we must choose between liberal democracy and a form of authoritarian government by experts the authors offer up a radical reform of democracy that would entail the painful choice of curtailing our worldwide reliance on growth economies along with various legal and fiscal reforms. Unpalatable as this choice may be they argue for the adoption of this fundamental reform of democracy over the journey to authoritarianism.

Human Activity and the Environment, 2000 Statistics Canada. System of National Accounts Branch, 2000. Canadians recognize the importance of a clean and healthy environment. We understand that the capacity of the environment to supply materials and absorb wastes is finite. But to be effective at reducing our collective impact on the environment we need systematic accessible and relevant information. Without such information we are unable to understand and respond to environmental change. *Human activity and the environment 2000* meets this need with a collection of environmental statistics brought together from many sources. The report provides a statistical picture of Canada's environment with special emphasis on human activity and its relationship to natural systems air water soil plants and animals. The fact that much of Canada's economy is supported by the wealth of its natural resources raises questions about the sustainability of our resource use. Can we maintain air water and soil quality? Can we continue to extract renewable and non renewable resources at current rates? Are we implementing conservation and recycling measures? This edition of *Human activity and the environment* provides extensive data on population economic activities the environment and the links among these key elements. Analysis and interpretation support the statistics and help readers make sense of these complex interactions. STC BiblioCat *Greens in*
