

Chapter 14

- 14-1** (a) The initial pH of the NH_3 solution will be less than that for the solution containing NaOH. With the first addition of titrant, the pH of the NH_3 solution will decrease rapidly and then level off and become nearly constant throughout the middle part of the titration. In contrast, additions of standard acid to the NaOH solution will cause the pH of the NaOH solution to decrease gradually and nearly linearly until the equivalence point is approached. The equivalence point pH for the NH_3 solution will be well below 7, whereas for the NaOH solution it will be exactly 7.
- (b) Beyond the equivalence point, the pH is determined by the excess titrant. Thus, the curves become identical in this region.
- 14-2** Completeness of the reaction between the analyte and the reagent and the concentrations of the analyte and reagent.
- 14-3** The limited sensitivity of the eye to small color differences requires that there be a roughly tenfold excess of one or the other form of the indicator to be present in order for the color change to be seen. This change corresponds to a pH range of ± 1 pH unit about the pK of the indicator.
- 14-4** Temperature, ionic strength, and the presence of organic solvents and colloidal particles.
- 14-5** The standard reagents in neutralization titrations are always strong acids or strong bases because the reactions with this type of reagent are more complete than with those of their weaker counterparts. Sharper end points are the consequence of this difference.

Analytical Chemistry II Ulf Ritgen, 2025-05-13 This workbook takes you through the successful textbook Skoog Holler Crouch *Instrumentelle Analytik* and is designed primarily for self study In five parts the lecture content of more advanced analytical chemistry is summarized and explained using selected examples mass spectrometry and nuclear magnetic resonance spectroscopy deal with the investigation of molecules and numerous electroanalytical methods such as potentiometry coulometry amperometry and voltammetry are also covered An overview of more specialized analytical methods includes the use of radioactive substances and various fluorescence methods as well as methods of information acquisition in the increasingly important electrochemical and optical sensor technology and their automation The course concludes with a summary of various principles and application methods of statistics which are simply indispensable in the context of analytics In order to facilitate independent learning references to essential sections and illustrations of the textbook are made throughout the book Not least because of the numerous examples the book which is aimed at students of chemistry or related scientific subjects provides an easy to understand introduction to more complex aspects of analytical chemistry In direct continuation

of the workbook Analytical Chemistry I references are made again and again to already known basics from other courses which facilitate the linking of the familiar and the new Learning with this workbook has been tested in a distance learning chemistry course and facilitates preparation for module examinations in more advanced analytical chemistry This book is a translation of the original German 1st edition Analytische Chemie II by Ulf Ritgen published by Springer Verlag GmbH Germany part of Springer Nature in 2020 The translation was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors

A Consumer's Guide to Archaeological Science Mary E. Malainey, 2010-09-28 Many archaeologists as primarily social scientists do not have a background in the natural sciences This can pose a problem because they need to obtain chemical and physical analyses on samples to perform their research This manual is an essential source of information for those students without a background in science but also a comprehensive overview that those with some understanding of archaeological science will find useful The manual provides readers with the knowledge to use archaeological science methods to the best advantage It describes and explains the analytical techniques in a manner that the average archaeologist can understand and outlines clearly the requirements benefits and limitations of each possible method of analysis so that the researcher can make informed choices The work includes specific information about a variety of dating techniques provenance studies isotope analysis as well as the analysis of organic lipid and protein residues and ancient DNA Case studies illustrating applications of these approaches to most types of archaeological materials are presented and the instruments used to perform the analyses are described Available destructive and non destructive approaches are presented to help archaeologists select the most effective technique for gaining the target information from the sample Readers will reach for this manual whenever they need to decide how to best analyze a sample and how the analysis is performed
