Kim,2025-02-27 As data driven methods for defect detection become more prevalent in the railway industry the demand for high quality data continues to grow However field experiments are often time consuming and constrained by practical limitations This study introduces a methodology that uses Fused Deposition Modeling FDM 3D printing to develop a scale model for simulating wheel flat induced vibrations combined with a Long Short Term Memory LSTM based generative model to produce synthetic vibration data This approach improves data quality by enhancing quantity variety and velocity while increasing data volume and reducing the need for extensive experimental testing The LSTM based model generates realistic synthetic data minimizing reliance on labor intensive field experiments and offering a broader spectrum of defect scenarios By accelerating the data generation process this method provides an effective alternative in a laboratory setting and contributes to foundational research aimed at improving defect detection and maintenance processes in the railway industry

Leroy Hulsey, 2005 The live load distribution factor DF equations provided by AASHTO LRFD for the decked precast prestressed concrete DPPC girder bridge system do not differentiate between a single or multilane loaded condition This practice results in a single lane load rating penalty for DPPC girder bridges The objective of this project is to determine DF equations which accurately predict the distribution factor of the DPPC girder bridge system when it is only subjected to single lane loading Eight DPPC girder bridges were instrumented Each bridge was loaded with a single load vehicle to simulate the single lane loaded condition The experimental data was used to calibrate 3D FE models and 2D grillage models of the DPPC girder bridge system The calibrated models were used to conduct a parametric study of the

DPPC girder bridge system subjected to a single lane loaded condition Two sets of new equations that describe the single lane loaded distribution factor for both shear and moment forces of these bridges are proposed and compared with AASHTOLRFD DF equations **Proceedings of the Institution of Civil Engineers** ,2004
