Parallel Programming for Modern High Performance Computing Systems Pawel Czarnul, 2018-03-05 In view of the growing presence and popularity of multicore and manycore processors accelerators and coprocessors as well as clusters using such computing devices the development of efficient parallel applications has become a key challenge to be able to exploit the performance of such systems This book covers the scope of parallel programming for modern high performance computing systems It first discusses selected and popular state of the art computing devices and systems available today These include multicore CPUs manycore co processors such as Intel Xeon Phi accelerators such as GPUs and clusters as well as programming models supported on these platforms It next introduces parallelization through important programming paradigms such as master slave geometric Single Program Multiple Data SPMD and divide and conquer The practical and useful elements of the most popular and important APIs for programming parallel HPC systems are discussed including MPI OpenMP Pthreads CUDA OpenCL and OpenACC It also demonstrates through selected code listings how selected APIs can be used to implement important programming paradigms Furthermore it shows how the codes

can be compiled and executed in a Linux environment The book also presents hybrid codes that integrate selected APIs for potentially multi level parallelization and utilization of heterogeneous resources and it shows how to use modern elements of these APIs Selected optimization techniques are also included such as overlapping communication and computations implemented using various APIs Features Discusses the popular and currently available computing devices and cluster systems Includes typical paradigms used in parallel programs Explores popular APIs for programming parallel applications Provides code templates that can be used for implementation of paradigms Provides hybrid code examples allowing multi level parallelization Covers the optimization of parallel programs

Principles and Labs for Deep Learning Shih-Chia Huang, Trung-Hieu Le, 2021-07-06 Principles and Labs for Deep Learning provides the knowledge and techniques needed to help readers design and develop deep learning models Deep Learning techniques are introduced through theory comprehensively illustrated explained through the TensorFlow source code examples and analyzed through the visualization of results The structured methods and labs provided by Dr Huang and Dr Le enable readers to become proficient in TensorFlow to build deep Convolutional Neural Networks CNNs through custom APIs high level Keras APIs Keras Applications and TensorFlow Hub Each chapter has one corresponding Lab with step by step instruction to help the reader practice and accomplish a specific learning outcome Deep Learning has been successfully applied in diverse fields such as computer vision audio processing robotics natural language processing bioinformatics and chemistry Because of the huge scope of knowledge in Deep Learning a lot of time is required to understand and deploy useful working applications hence the importance of this new resource Both theory lessons and experiments are included in each chapter to introduce the techniques and provide source code examples to practice using them All Labs for this book are placed on GitHub to facilitate the download The book is written based on the assumption that the reader knows basic Python for programming and basic Machine Learning Introduces readers to the usefulness of neural networks and Deep Learning methods Provides readers with in depth understanding of the architecture and operation of Deep Convolutional Neural Networks Demonstrates the visualization needed for designing neural networks Provides readers with an in depth understanding of regression problems binary classification problems multi category classification problems Variational Auto Encoder Generative Adversarial Network and Object detection
