Book Description

The number of applications of deep learning and neural networks has multiplied in the last couple of years. Neural nets has enabled significant breakthroughs in everything from computer vision, voice generation, voice recognition and self driving cars. Game development is also a key area where these techniques are being applied. This book will give an in depth view of the potential of deep learning and neural networks in game development. We will take a look at the foundations of multi layer perceptrons to using convolutional and recurrent networks. In applications from GANs that create music or textures to self driving cars and chatbots. Then we introduce deep reinforcement learning through the multi armed bandit problem and other OpenAI Gym environments. As we progress through the book we will gain insights about DRL techniques such as Motivated Reinforcement Learning with Curiosity and Curriculum Learning. We also take a closer look at deep reinforcement learning and in particular the Unity ML Agents toolkit. By the end of the book we will look at how to apply DRL and the ML Agents toolkit to enhance test and automate your games or simulations. Finally we will cover your possible next steps and possible areas for future learning.

What you will learn

Learn the foundations of neural networks and deep learning. Use advanced neural network architectures in applications to create music, textures, self driving cars and chatbots.
