A Clinical Guide to the Treatment of the Human Stress Response George S. Everly, Jr., Jeffrey M.

Lating, 2019-03-05 This comprehensive update of the now classic text applies the most current findings across disciplines to the treatment of pathogenic human stress arousal. New and revised chapters bring together the art and science of intervention based in up to date neuroscience starting with an innovative model tracing the stress to disease continuum throughout the systems of the human body. The authors detail the spectrum of physiological and psychological treatments for the stress response including cognitive therapy, neuromuscular relaxation, breathing exercises, nutritional interventions, and pharmacotherapy. They also assess the strengths and limitations of widely used measures of the stress response and consider the value of personality factors, cultural considerations, and resilience in stress mediation. Included in the coverage: The anatomy and physiology of the human stress response; Advances in neuroscience implications for stress; Crisis intervention and psychological first aid; Neurophysiological rationale for the use of the relaxation response; Physical exercise and the human stress response; The pharmacological management of stress reactions; Disaster Mental Health Planning; Cultural Awareness and Stress. The Fourth Edition of *A Clinical Guide to the Treatment of Human Stress Response* offers readers a dual perspective, exceedingly useful in examining the origins of the stress response and in preventing and treating the response itself. This rich integrative volume will join its predecessors in popularity among practitioners and students across disciplines and specialties.

Pediatric Psychopharmacology Andres Martin, Lawrence Scahill, Dennis S. Charney, James F.

Leckman, 2002-10-17 *Pediatric Psychopharmacology: Principles and Practice* is an authoritative and comprehensive text on the use of medication in the treatment of children and adolescents with serious neuropsychiatric disorders. This benchmark volume consists of 56 chapters written by internationally recognized leaders and is divided into four interrelated sections. The first, *Biological Bases of Pediatric Psychopharmacology*, reviews key principles of neurobiology and the major psychiatric illnesses of childhood from a perspective rooted in developmental psychopathology. The second, *Somatic Interventions*, presents the major classes of psychiatric drugs as well as complementary and alternative somatic interventions such as electroconvulsive therapy, ECT, transcranial magnetic stimulation, rTMS, and naturopathic approaches. The third and longest section, *Assessment and Treatment*, starts with clinical assessment, diagnostic evaluation, and comprehensive treatment planning and goes on to cover the evidence-based analysis of drug treatments for the major disorders. Special populations such as children with comorbid mental retardation, substance abuse, or medical illness are specifically discussed, and the coordination of their treatment with non-somatic therapies is explicitly addressed. The final section, *Epidemiologic Research and Methodological Considerations*, deals with broad population-relevant topics such as regulation and policy, pharmacoepidemiology, and the critical importance of sound ethical principles for clinical investigation. The book concludes with an appendix on generic and commercial drug name equivalencies, preparations, and available dosages. This timely text is
