Advances in Machine Learning and Data Science Damodar Reddy Edla, Pawan Lingras, Venkatanaresbabu K., 2018-05-16 The Volume of Advances in Machine Learning and Data Science Recent Achievements and Research Directives constitutes the proceedings of First International Conference on Latest Advances in Machine Learning and Data Science LAMDA 2017 The 37 regular papers presented in this volume were carefully reviewed and selected from 123 submissions These days we find many computer programs that exhibit various useful learning methods and commercial applications Goal of machine learning is to develop computer programs that can learn from experience Machine learning involves knowledge from various disciplines like statistics information theory artificial intelligence computational complexity cognitive science and biology For problems like handwriting recognition algorithms that are based on machine learning out perform all other approaches Both machine learning and data science are interrelated Data science is an umbrella term to be used for techniques that clean data and extract useful information from data In field of data science machine learning algorithms are used frequently to identify valuable knowledge from commercial databases containing records of different industries financial transactions medical records etc The main objective of this book is to provide an overview on latest advancements in the field of machine learning and data science with solutions to problems in field of image video data and graph processing pattern recognition data structuring data clustering pattern mining association rule based approaches feature extraction techniques neural networks bio inspired learning and various machine learning algorithms

Research Anthology on Machine Learning Techniques, Methods, and Applications Management Association, Information Resources, 2022-05-13 Machine learning continues to have myriad applications across industries and fields To ensure this technology is utilized appropriately and to its full potential organizations must better understand exactly how and where it can be adapted Further study on the applications of machine learning is required to discover its best practices challenges and strategies The Research Anthology on Machine Learning Techniques Methods and Applications provides a thorough consideration of the innovative and emerging research within the area of machine learning The book discusses how the technology has been used in the past as well as potential ways it can be used in the future to ensure industries continue to develop and grow Covering a range of topics such as artificial intelligence deep learning cybersecurity and robotics this major reference work is ideal for computer scientists managers researchers scholars practitioners academicians instructors and students

Machine Learning for Mobile Revathi Gopalakrishnan, Avinash Venkateswarlu, 2018-12-31 Leverage the power of machine learning on mobiles and build intelligent mobile applications with ease Key Features Build smart mobile applications for Android and iOS devices Use popular machine learning toolkits such as Core ML and TensorFlow Lite Explore cloud services for machine learning that can be used in mobile apps Book Description Machine learning presents an entirely unique opportunity in software development It allows smartphones to produce an enormous amount of useful data that can be mined analyzed and

used to make predictions This book will help you master machine learning for mobile devices with easy to follow practical examples You will begin with an introduction to machine learning on mobiles and grasp the fundamentals so you become well acquainted with the subject You will master supervised and unsupervised learning algorithms and then learn how to build a machine learning model using mobile based libraries such as Core ML TensorFlow Lite ML Kit and Fritz on Android and iOS platforms In doing so you will also tackle some common and not so common machine learning problems with regard to Computer Vision and other real world domains By the end of this book you will have explored machine learning in depth and implemented on device machine learning with ease thereby gaining a thorough understanding of how to run create and build real time machine learning applications on your mobile devices What you will learn Build intelligent machine learning models that run on Android and iOS Use machine learning toolkits such as Core ML TensorFlow Lite and more Learn how to use Google Mobile Vision in your mobile apps Build a spam message detection system using Linear SVM Using Core ML to implement a regression model for iOS devices Build image classification systems using TensorFlow Lite and Core ML Who this book is for If you are a mobile app developer or a machine learning enthusiast keen to use machine learning to build smart mobile applications this book is for you Some experience with mobile application development is all you need to get started with this book Prior experience with machine learning will be an added bonus

ICT for Competitive Strategies Durgesh Kumar Mishra, Nilanjan Dey, Bharat Singh Deora, Amit Joshi, 2020-05-05 Fourth International Conference on Information and Communication Technology for Competitive Strategies targets state of the art as well as emerging topics pertaining to information and communication technologies ICTs and effective strategies for its implementation for engineering and intelligent applications

Signal Processing Techniques for Computational Health Informatics Md Atiqur Rahman Ahad, Mosabber Uddin Ahmed, 2020-10-07 This book focuses on signal processing techniques used in computational health informatics As computational health informatics is the interdisciplinary study of the design development adoption and application of information and technology based innovations specifically computational techniques that are relevant in health care the book covers a comprehensive and representative range of signal processing techniques used in biomedical applications including bio signal origin and dynamics sensors used for data acquisition artefact and noise removal techniques feature extraction techniques in the time frequency time frequency and complexity domain and image processing techniques in different image modalities Moreover it includes an extensive discussion of security and privacy challenges opportunities and future directions for computational health informatics in the big data age and addresses the incorporation of recent techniques from the areas of artificial intelligence deep learning and human computer interaction The systematic analysis of the state of the art techniques covered here helps to further our understanding of the physiological processes involved and expandour capabilities in medical diagnosis and prognosis In closing the book the first of its kind blends state of the art theory and practices of signal processing techniques in the health informatics domain with real world case studies building on

those theories As a result it can be used as a text for health informatics courses to provide medics with cutting edge signal processing techniques or to introduce health professionals who are already serving in this sector to some of the most exciting computational ideas that paved the way for the development of computational health informatics

Convolutional Neural Network in classifying scanned documents Tai Doan, 2016-12-30 Internship Report from the year 2016 in the subject Computer Science Applied University of Science and Technology of Hanoi course Internship language English abstract In this project I created and augmented a dataset from a number of given images to train and test convolutional neural network which is used to classify five classes of images of scanned documents In order to generate the dataset some image processing techniques were applied such as sliding window rotating flipping and pyramid sizing The result of this phase is a set of images having same size 244x224x3 These images after being labeled were divided into three dataset for training validating and testing the network The network is a simple convolution neural network which is also called LeNet It has three convolutional layers and one fully connected layer After being trained and

validated the best state of the network was pointed out and tested on the testing dataset and some real images The result showed that the LeNet was able to classify images of documents in a pretty high accuracy At the end of the project I modified the network and discussed the affect that those changes had on the network with the purpose of creating another similar network which can perform better than the original one The result proved that it worked a little better than its original version

R Machine Learning by Example Raghav Bali,Dipanjan Sarkar,2016 Understand the fundamentals of machine learning with R and build your own dynamic algorithms to tackle complicated real world problems successfullyAbout This Book Get to grips with the concepts of machine learning through exciting real world examples Visualize and solve complex problems by using power packed R constructs and its robust packages for machine learning Learn to build your own machine learning system with this example based practical guideWho This Book Is ForIf you are interested in mining useful information from data using state of the art techniques to make data driven decisions this is a go to guide for you No prior experience with data science is required although basic knowledge of R is highly desirable Prior knowledge in machine learning would be helpful but is not necessary What You Will Learn Utilize the power of R to handle data extraction manipulation and exploration techniques Use R to visualize data spread across multiple dimensions and extract useful features Explore the underlying mathematical and logical concepts that drive machine learning algorithms Dive deep into the world of analytics to predict situations correctly Implement R machine learning algorithms from scratch and be amazed to see the algorithms in action Write reusable code and build complete machine learning systems from the ground up Solve interesting real world problems using machine learning and R as the journey unfolds Harness the power of robust and optimized R packages to work on projects that solve real world problems in machine learning and data scienceIn DetailData science and machine learning are some of the top buzzwords in the technical world today From retail stores to Fortune 500 companies everyone is working hard to making machine learning give them data driven insights to grow their business With powerful data manipulation features machine learning packages and an active developer community R empowers users to build sophisticated machine learning systems to solve real world data problems This book takes you on a data driven journey that starts with the very basics of R and machine learning and gradually builds upon the concepts to work on projects that tackle real world problems You ll begin by getting an understanding of the core concepts and definitions required to appreciate machine learning algorithms and concepts Building upon the basics you will then work on three different projects to apply the concepts of machine learning following current trends and cover major algorithms as well as popular R packages in detail These projects have been neatly divided into six different chapters covering the worlds

of e commerce finance and social media which are at the very core of this data driven revolution Each of the projects will help you to understand explore visualize and derive insights depending upon the domain and algorithms Through this book you will learn to apply the concepts of machine learning to deal with data related problems and solve them using the powerful yet simple language R Style and approachThe book is an enticing journey that starts from the very basics to gradually pick up pace as the story unfolds Each concept is first defined in the larger context of things succinctly followed by a detailed explanation of their application Each topic is explained with the help of a project that solves a real real world problem involving hands on work thus giving you a deep insight into the world of machine learning
