**Emerging Computer Technologies 2** Ömer Aydın, Radosveta Sokullu, Özkan Akın, Erginay Aslan, Oliver Simonoski, Ninoslav Marina, Natasa Paunkoska (Dimoska), Izabela Mitreska, Mustafa Ceyhan, Enis Karaarslan, 2022-12-31

There is rapid development and change in the field of computer science today. These affect all areas of life. Emerging topics in computer science are covered in this book. In the first chapter, a specific IoT application called a smart mailbox with face recognition which uses cellular connectivity and image processing to securely deliver valuable documents. The prototype for this system includes a fingerprint reader, camera, electromagnetic lock, and various other components connected to an Arduino Uno and a Raspberry Pi, and uses OpenCV and Python software for face detection and recognition. In the second chapter, authors compare and evaluate the main characteristics of 5G channels and the performance of two channel coding candidates: low density parity check LDPC codes and polar codes. The analysis considers block error rate, bit error rate, computational complexity, and flexibility, and finds that polar codes outperform LDPC code systems, though LDPC is still a viable option compared to other code systems. The third chapter focuses on how to reliably process and store DNA sequences in EHR systems without any modifications. To achieve this, the authors introduce a coding technique and evaluate its effectiveness using the Hamming code and Reed Solomon coding schemes on a sample data set. The results show that the Reed Solomon coding scheme outperforms the Hamming code in terms of error detection and correction for securely processing DNA records to EHR systems. The next chapter investigates the robustness of AI models trained on thyroid ultrasound images using different convolutional neural network CNN architectures: VGG19, Xception, ResNet50V2, and EfficientNetB2, against adversarial attacks using the fast gradient sign method FGSM, basic iterative method BIM, and projected gradient descent PGD techniques. In the fifth chapter, it was questioned whether artificial intelligence could write an academic article. In this direction, an academic article was created and evaluated by OpenAI ChatGPT. The final chapter proposes an application to measure RF signal intensities in urban areas and use that information to estimate the amount of energy that can be harvested from these signals. This information is then presented to users through a geographical information system.

*The Rise of Generative AI: Applications, Challenges, and Ethical Implications* Fatima Mazreku, 2025-12-10

Scientific Study from the year 2025 in the subject Computer Sciences Artificial Intelligence language English abstract

Generative Artificial Intelligence (AI) refers to algorithms and models capable of producing new content such as text, images, music, or code that mimics or even rivals human creations. Recent breakthroughs in model architectures, e.g., transformers, and the advent of large-scale models like OpenAI's GPT-3 and DALL-E have fueled an explosive growth in generative AI's capabilities and public adoption. This paper provides an overview of generative AI's rise and its transformative impact across various fields. We discuss key applications of generative AI in domains ranging from art and design to software development and medicine, highlighting the innovative benefits it brings, such as enhanced creative productivity and new problem-solving tools. At the same time, we examine the challenges and ethical concerns emerging from generative AI's widespread use, including issues of bias, misinformation, intellectual property, and misuse that have become increasingly urgent. We also analyze the current technical limitations of generative AI, including accuracy, interpretability, and resource demands, and consider future outlooks for the technology. The findings underscore that while generative AI offers unprecedented opportunities and innovations, careful consideration of its ethical implications and proactive governance is essential to ensure it is developed and used responsibly. In conclusion, generative AI stands as a powerful tool that is reshaping creativity, industry, and society, and its continued evolution will depend on balancing its benefits with diligent management of its risks.

Co-Intelligence Ethan Mollick, 2024-04-02 AN INSTANT NEW YORK TIMES BESTSELLER

From Wharton professor and author of the popular One Useful Thing Substack newsletter, Ethan Mollick comes the definitive playbook for working, learning, and living in the new age of AI. Something new entered our world in November 2022: the first general-purpose AI that could pass for a human and do the kinds of creative, innovative work that only humans could do previously. Wharton professor Ethan Mollick immediately understood what ChatGPT meant after millions of years on our own: humans had developed a kind of co-intelligence that could augment or even replace human thinking. Through his writing, speaking, and teaching, Mollick has become one of the most prominent and provocative explainers of AI, focusing on the practical aspects of how these new tools for thought can transform our world. In *Co-Intelligence*, Mollick urges us to engage with AI as co-worker, co-teacher, and coach. He assesses its profound impact on business and education using dozens of real-time examples of AI in action. *Co-Intelligence* shows what it means to think and work together with smart machines and why it's imperative that we

master that skill Mollick challenges us to utilize AI's enormous power without losing our identity to learn from it without being misled and to harness its gifts to create a better human future. Wide-ranging, hugely thought-provoking, optimistic and lucid. Co-Intelligence reveals the promise and power of this new era.
