

3D

THE SHARED INFORMATION MODEL

3D BIM is the process of developing the project and generating necessary information in a Common Data Environment (CDE).

3D models can be used for visualisation purposes, coordination between disciplines and more.

4D

CONSTRUCTION SEQUENCE

In 4D BIM, each building component has time-related information. Project teams can use those data to produce a construction sequence simulation.

This process is giving everyone a clear understanding of the construction development at each phase.

5D

ESTIMATING & COSTING

With 5D BIM, building components in the model have cost information (purchasing cost, installing cost, maintenance cost and more).

The cost can be tracked and updated automatically during the whole process and while changes are happening.

6D

PROJECT LIFE-CYCLE (integrated) iBIM

6D BIM comes in where information for supporting facilities management and operation are added to the project.

Facilities managers have a clear understanding of what and when things require maintenance and how much they will cost.

Sampaio,2016 A bridge is the type of structure whose appearance normally deserves more attention because it not only has an evident impact on the environment but also represents considerable investment both of which justify careful evaluation The aesthetic analysis is an important issue that must be considered when designing a new bridge especially when it is to be built in an urban or road environment In this context the automatic generation of three dimensional 3D geometric models of the bridge under analysis and the walk around and aerial simulation allowed over it which can be generated helps bridge designers to evaluate its aesthetic concept and environmental impact The bridge construction process can also be simulated helping designers and builders to review the progress of the construction work in situ For that 4D 3D time models of the most frequent bridge construction methods were generated using virtual reality VR technology The simulation of the construction activity made possible by the developed interactive 4D model helps bridge designers to analyse the whole construction process The present study aims to analyse the mechanisms of how to generate 3D models of a bridge automatically and how to simulate its construction using VR capacities *3D Digital Models as Highway Construction Contract Documents* ,2022 State departments of transportation DOTs have been investing in 3D modeling and sharing 3D digital models with contractors Some DOTs have piloted the use of 3D digital models as contract documents others continue to provide contractors with 3D digital models for information purposes and some have not begun using 3D digital models in construction The TRB National Cooperative Highway Research Program s NCHRP Synthesis 593 *3D Digital Models as Highway Construction Contract Documents* details the current state of DOT practices for delivering 3D digital models to highway contractors and the use of these models as part of the legal construction contract document
