Glass fiber-reinforced polyamide 6 (PA 6) can also be processed using thermoforming techniques, as shown by various protective covers for ships' engines manufactured by [MTU Friedrichshafen GmbH](#), [Reiss Kunststofftechnik GmbH](#) based in Tettnang, Germany makes the covers from SUSTAVACL® 6 GF semi-finished products. These sheets are among the first thermoformable semi-finished products made of polyamide 6 available on the market. They are manufactured by [Röchling AG SUSTAPLAST KG](#), Lehnstein, Germany, and consist of Durethan® BKV 315 Z H2.0 from LANXESS. Their high heat resistance compared with standard thermoformed materials was one of the features that made them particularly useful for ships' engines. Furthermore, vacuum thermoforming is the most cost-effective solution for this application. Compared with injection molding, molds can be built for a fraction of the cost – particularly when large components are to be produced.

Another reason for using PA 6 semi-finished products is their high tensile strength and stiffness. Their stiffness allows the walls to be made thinner than is possible with other thermoformed materials. Although the engine covers are large, dimensional stability is high and warpage minimal. They are also highly resistant to breakage because the PA 6 has been modified for impact resistance. Along with their low weight, this is an important factor in withstanding the high dynamic loads caused by engine vibration. Thanks to the high heat resistance of PA 6, the cover components can withstand continuous working temperatures of 140 °C with short-term temperature peaks of 170 °C. For use in the engine room, they also have the necessary resistance to oil, grease, diesel fuel and many other chemicals typically found on board ships.
