Catalytic Reactor Design Pollution Prevention:

Reaction Engineering for Pollution Prevention R.P. Hesketh, Martin A. Abraham, 2000-02-09 This book defines environmental reaction engineering principles including reactor design for the development of processes that provide an environmental benefit With regard to pollution prevention the focus is primarily on new reaction and reactor technologies that minimize the production of undesirable side products pollutants but the use of reaction engineering as a means of treating wastes that are produced through other means is also considered First is a section on environmentally benign combustion The three papers discuss methods of reducing the formation of PAHs and NO_x as well as other environmentally sensitive combustion products The next section contains a collection of contributions that involve the use of a catalyst to support the reaction Following this is a section on the use of supercritical fluid solvents as environmentally friendly media for chemical reactions Finally a series of papers is presented in which novel reactor designs are utilized to obtain product yields not possible in conventional reactor systems These include the use of reactor absorber systems reactive distillation and reactive membranes The book concludes with a chapter contributed by the editors which discusses the educational aspects of pollution prevention It is necessary for future generations of engineers to be trained to design processes that are inherently environmentally benign This chapter assembles resource materials for educators which will spark the creative instincts of the researchers using the materials contained within this book to develop new resources for pollution prevention education The broad spectrum of topics included in this book indicates the diversity of this area and the vibrant nature of the ongoing research The possibilities of producing desirable products without the formation of waste byproducts are bounded only by the creativity of the reaction engineer

Industrial Pollution Prevention Handbook Harry Freeman, 1995 This book provides information and techniques for implementing the pollution prevention P2 environmental strategy preferred by government and industry It focuses on the latest technologies for preventing or reducing the creation of new waste streams by improving management practices boosting efficiency replacing toxic materials in the production process or modifying the products themselves

Catalysis James J Spivey, Yi-Fan Han, Dushyant Shekhawat, 2024-03-27 Looking at modern approaches to catalysis this volume reviews the extensive literature published on this area Chapter highlights include Fenton chemistry advanced manufacturing in heterogeneous catalysis membrane reactors for light alkane dehydrogenation and new insights and enhancement of biocatalysts for biomass conversion in the bioproducts industry Appealing to researchers in academia and industry the detailed chapters bridge the gap from academic studies in the laboratory to practical applications in industry not only for the catalysis field but also for environmental protection The book will be of great benefit to any researcher wanting a succinct reference on developments in this area now and looking to the future
