

# CCS811

## Ultra-Low Power Digital Gas Sensor For Monitoring Indoor Air Quality

### General Description

The CCS811 is an ultra-low power digital gas sensor solution which integrates a metal oxide (MOX) gas sensor to detect a wide range of Volatile Organic Compounds (VOCs) for indoor air quality monitoring with a microcontroller unit (MCU), which includes an Analog-to-Digital Converter (ADC), and an I<sup>2</sup>C interface.

CCS811 is based on ~~an~~ unique micro-thermal technology which enables a highly reliable solution. No gas sensors, no 5V full cycle times and a significant reduction in average power consumption.

The integrated MCU manages the sensor driver modes and measurements. The I<sup>2</sup>C digital interface significantly simplifies the hardware and software design, enabling a faster time to market.

CCS811 supports intelligent algorithms to process raw sensor measurements, to output equivalent CO2 (eCO2) and equivalent CO2 to CO2 ratio, where the ratio (eCO2 to CO2) is known as ToxIndex.

CCS811 supports multiple measurement modes (continuous, low power, low power + low consumption during an active sensor cycle) and can be configured to output summary data at programmable intervals.

CCS811 comes in a 3.3V, 2.5V and 1.8V version, 3.3V and 1.8V patch QFN package.
