## Financial Statement Analysis

---

### Solutions to Questions

**14-1** Horizontal analysis examines how a particular item on a financial statement such as sales or cost of goods sold behaves over time. Vertical analysis involves analysis of items on an income statement or balance sheet for a single period. In vertical analysis of the income statement, all items are typically stated as a percentage of sales. In vertical analysis of the balance sheet, all items are typically stated as a percentage of total assets.

**14-5** The dividend yield is the dividend per share divided by the market price per share. The other source of return on an investment in stock is increases in market value.

**14-6** Financial leverage results from borrowing funds at an interest rate that differs from the rate of return on assets acquired using those funds. If the rate of return on the assets is higher than the interest rate at which the funds were borrowed, financial leverage is positive and stockholders gain. If the return on the assets is lower than the interest rate, financial leverage is negative and the stockholders lose.

**14-7** If the company experiences big variations in net cash flows from operations, stockholders might be pleased that the company has no debt. In hard times, interest payments might be very difficult to meet.

On the other hand, if investments within the company
