Mathematics of Program Construction This series of conferences aims to promote the development of mathematical principles and techniques that are demonstrably useful in the process of constructing computer programs whether implemented in hardware or software The focus is on techniques that combine precision with conciseness enabling programs to be constructed by formal calculation Within this theme the scope of the series is very diverse including programming methodology program specification and transformation programming paradigms programming calculi and programming language semantics The quality of the papers submitted to the conference was in general very high and the number of submissions was comparable to that for the previous conference Each paper was refereed by at least four and often more committee members This volume contains 19 papers selected for presentation by the program committee from 37 submissions as well as the abstract of one invited talk titled Static Checking for Java by Greg Nelson Imaging Systems Department HP Labs Palo Alto California The conference took place in Stirling Scotland The previous six conferences were held in 1989 in Twente The Netherlands in 1992 in Oxford UK in 1995 in Kloster Irsee Germany in 1998 in Marstrand near Göteborg Sweden in 2000 in Ponte de Lima Portugal and in 2002 in Dagstuhl Germany The proceedings of these conferences were published as LNCS 375 669 947 1422 1837 and 2386 respectively

Practical Aspects of Declarative Languages Bharat Jayaraman, 2004-05-19 The International Symposium on Practical Aspects of Declarative Languages PADL is a forum for researchers and practitioners to present original work emphasizing novel applications and implementation techniques for all forms of declarative concepts especially those emerging from functional logic and constraint languages Declarative languages have been studied since the inception of computer science and continue to be a vibrant subject of investigation today due to their applicability in current application domains such as bioinformatics network configuration the Semantic Web telecommunications software etc The 6th PADL Symposium was held in Dallas Texas on June 18-19 2004 and was co-located with the Compulog Americas Summer School on Computational Logic From the submitted papers the program committee selected 15 for presentation at the symposium based upon three written reviews for each paper which were provided by the members of the program committee and additional referees Two invited talks were presented at the conference The first was given by Paul Hudak Yale University on An Algebraic Theory of Polymorphic Temporal Media The second invited talk was given by Andrew Fall Dowland Technologies and Simon Fraser University on Supporting Decisions in Complex Uncertain Domains with Declarative Languages Following the precedent set by the previous PADL symposium the program committee this year again selected one paper to receive the Most Practical paper award

Programming Languages and Systems Daniel Le Metayer, 2003-08-01 ETAPS 2002 was the fifth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised 5 conferences FOSSACS FASE ESOP CC TACAS 13 satellite workshops ACL2 AGT CMCS COCV DCC INT LDTA SC SFEDL SLAP SPIN TPTS and VISS 8 invited lectures not including those specific to the satellite events and several

tutorials The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Generic Programming Roland Backhouse, Jeremy Gibbons, 2003-11-25 Generic programming attempts to make programming more efficient by making it more general This book is devoted to a novel form of genericity in programs based on parameterizing programs by the structure of the data they manipulate The book presents the following four revised and extended chapters first given as lectures at the Generic Programming Summer School held at the University of Oxford UK in August 2002 Generic Haskell Practice and Theory Generic Haskell Applications Generic Properties of Datatypes Basic Category Theory for Models of Syntax *Programming in Haskell* Graham Hutton, 2016-09-01 Haskell is a purely functional language that allows programmers to rapidly develop clear concise and correct software The language has grown in popularity in recent years both in teaching and in industry This book is based on the author's experience of teaching Haskell for more than twenty years All concepts are explained from first principles and no programming experience is required making this book accessible to a broad spectrum of readers While Part I focuses on basic concepts Part II introduces the reader to more advanced topics This new edition has been extensively updated and expanded to include recent and more advanced features of Haskell new examples and exercises selected solutions and freely downloadable lecture slides and example code The presentation is clean and simple while also being fully compliant with the latest version of the language including recent changes concerning applicative monadic foldable and traversable types **Mathematics of Program Construction**, 2004 **Proceedings of the Third ACM SIGPLAN International Conference on Functional Programming (ICFP '98)**, 1998 **Programming Languages and Systems**, 2002 *Functional Programming and Input/output* Andrew D.
